[The Unicode cookbook for linguists](#) Steven Moran, Michael Cysouw, 2018-06-29 This text is a practical guide for linguists and programmers who work with data in multilingual computational environments We introduce the basic concepts needed to understand how writing systems and character encodings function and how they work together at the intersection between the Unicode Standard and the International

Phonetic Alphabet Although these standards are often met with frustration by users they nevertheless provide language researchers and programmers with a consistent computational architecture needed to process and analyze lexical data from the world's languages Thus we bring to light common but not always transparent pitfalls which researchers face when working with Unicode and IPA Having identified and overcome these pitfalls involved in making writing systems and character encodings syntactically and semantically interoperable to the extent that they can be we created a suite of open source Python and R tools to work with languages using orthography profiles that describe author or document specific orthographic conventions In this cookbook we describe a formal specification of orthography profiles and provide recipes using open source tools to show how users can segment text analyze it identify errors and to transform it into different written forms for comparative linguistics research This book is a prime example of open publishing as envisioned by Language Science Press It is open access has accompanying open source software has open peer review versioning and so on
