Cognitive Resource Management for Heterogeneous Cellular Networks Yongkang Liu,Xuemin (Sherman) Shen,2014-05-07 This Springer Brief focuses on cognitive resource management in heterogeneous cellular networks Het Net with small cell deployment for the LTE Advanced system It introduces the Het Net features presents practical approaches using cognitive radio technology in accommodating small cell data relay and optimizing resource allocation and examines the effectiveness of resource management among small cells given limited coordination bandwidth and wireless channel uncertainty The authors introduce different network characteristics of small cell investigate the mesh of small cell access points in parallel with macrocells in network control and resource management and address resource management in the backhaul with coordination constraints and wireless channel uncertainty The final section of this brief summarizes and provides future research directions for this topic including a proposed framework that has been evaluated through realistic simulations Cognitive Resource Management for Heterogeneous Cellular Networks is designed for researchers and professionals working in wireless communications and networks Advanced level students studying electrical and computer engineering should also find the content helpful

Optimizing IEEE 802.11i Resource and Security Essentials Iraj Sadegh Amiri,Parisa Naraei,Iman Saberi,2014-12-05 In the past decade the number of wireless devices has grown exponentially Decades ago all systems were wired computer systems Wireless technology was not accessible in mobile and portable devices until in recent years and has followed a variety of methods for encryption and resource management The purpose of the research in Optimizing IEE 802 11i Resources and Security Essentials is to determine the issues of the performance in current encryption methods in AES CCMP in different types of devices and handle it so that an optimized resource usage would be achieved with the required security Two modes for 802 11i for two different groups of devices is suggested and evaluated with the current encryption method for AES CCMP to compare the performance Almost every organization in today s world relies on wireless networks to transmit

information and much of that information should be kept secure Banking healthcare and the military are all vital industries that rely on wireless security for a huge section of their operations Security experts of today and tomorrow will learn a lot from Optimizing IEEE 802.11i Resources and Security Essentials and it can be used for master level in computer science information security wireless network security and cryptography The research in this book covers how to best balance security concerns with limited resources available on wireless devices as well as how to optimize security resources on higher end non mobile devices

Secure Routing and Medium Access Protocols in Wireless Multi-hop Networks Soufiene Djahel,2011-12 Doctoral Thesis Dissertation from the year 2011 in the subject Computer Science Internet New Technologies Lille 1 University Laboratoire d Informatique Fondamentale de Lille course Security in Wireless Multi hop Networks language English abstract While the rapid proliferation of mobile devices along with the tremendous growth of various applications using wireless multi hop networks have significantly facilitate our human life securing and ensuring high quality services of these networks are still a primary concern In particular anomalous protocol

operation in wireless multi hop networks has recently received considerable attention in the research community These relevant security issues are fundamentally different from those of wireline networks due to the special characteristics of wireless multi hop networks such as the limited energy resources and the lack of centralized control These issues are extremely hard to cope with due to the absence of trust relationships between the nodes To enhance security in wireless multi hop networks this dissertation addresses both MAC and routing layers misbehaviors issues with main focuses on thwarting black hole attack in proactive routing protocols like OLSR and greedy behavior in IEEE 802.11 MAC protocol Our contributions are briefly summarized as follows As for black hole attack we analyze two types of attack scenarios one is launched at routing layer and the other is cross layer We then provide comprehensive analysis on the consequences of this attack and propose effective countermeasures As for MAC layer misbehavior we particularly study the adaptive greedy behavior in the context of Wireless Mesh Networks WMNs and propose FLSAC Fuzzy Logic based scheme to Struggle against Adaptive Cheaters to cope with it A new characterization of the greedy behavior in Mobile Ad Hoc Networks MANETs is also introduced Finally we design a new backoff scheme to quickly detect the greedy nodes that
