Characterization of Polymer Blends Sabu Thomas, Yves Grohens, P. Jyotishkumar, 2015-02-09 Filling the gap for a reference dedicated to the characterization of polymer blends and their micro and nano morphologies this book provides comprehensive systematic coverage in a one stop two volume resource for all those working in the field Leading researchers from industry and academia as well as from government and private research institutions around the world summarize recent technical advances in chapters devoted to their individual contributions In so doing they examine a wide range of modern characterization techniques from microscopy and spectroscopy to diffraction thermal analysis rheology mechanical measurements and chromatography These methods are compared with each other to assist in determining the best solution for both fundamental and applied problems paying attention to the characterization of nanoscale miscibility and interfaces both in blends involving copolymers and in immiscible blends The thermodynamics miscibility phase separation morphology and interfaces in polymer blends are also discussed in light of new insights involving the nanoscopic scale Finally the authors detail the processing morphology property relationships of polymer blends as well as the influence of processing on the generation of micro and nano morphologies and the dependence of these morphologies on the properties of blends Hot topics such as compatibilization through nanoparticles miscibility of new biopolymers and nanoscale investigations of interfaces in blends are also addressed With its application oriented approach handpicked selection of topics and expert contributors this is an outstanding survey for anyone involved in the field of polymer blends for advanced technologies

Characterization of Polymer Blends Sabu Thomas, Yves Grohens, Parameswaranpillai Jyotishkumar, 2015 *Fundamental Polymer Science* Ulf W. Gedde, Mikael S. Hedenqvist, Mats Johansson, Lars Berglund, Jakob Wohlert, 2025-10-24 This successor to the popular textbook *Polymer Physics* Springer 1999 is the result of a quarter century of teaching experience as well as critical comments from specialists in the various sub fields resulting in better explanations and more complete coverage of key topics With a new chapter on polymer synthesis the perspective was broadened in the second edition to encompass all of polymer science The third edition contains substantial information about polysaccharides and proteins included in essentially all chapters Cheap computing power has greatly expanded the role of simulation and modelling in the past decades which is reflected in many of the chapters Additional problems and carefully prepared graphics aid have been added Note the availability at Springer of the companion books by the same authors *Essential Classical Thermodynamics* 2020 and *Applied Polymer Science* 2021 Two principles are key to the textbook s appeal 1 Students learn that independent of the origin of the polymer synthetic or native the same general laws apply and 2 students should benefit from the book without an extensive knowledge of mathematics Taking the reader from the basics to an advanced level of understanding the text meets the needs of a wide range of students in chemistry physics materials science biotechnology and civil engineering and is suitable for both masters and doctoral level students Praise for the previous edition an excellent book well written authoritative clear and concise and

copiously illustrated with appropriate line drawings graphs and tables Polymer International an extremely useful book It is a pleasure to recommend it to physical chemists and materials scientists as well as physicists interested in the properties of polymeric materials Polymer News This valuable book is ideal for those who wish to get a brief background in polymer science as well as for those who seek a further grounding in the subject Colloid Polymer Science The solutions to the exercises are given in the final chapter making it a well thought out teaching text Polymer Science
