as CLASSICAL CARBONS Later other new carbons such as activated carbons and those with novel functions isotropic high density graphites intercalation compounds various composites etc were developed In 1994 Professor Michio Inagaki published a book entitled New Carbon Materials Structure and Functions with his friend Professor Yoshihiro Hishiyama of Musashi Institute of Technology published by Gihoudou Shuppan in Japanese However progress in the fields of these new carbons is so rapid that the previous book is already out of date For this reason the author has decided to write an English text on New Carbons The text focuses on New Carbons based on hexagonal networks of carbon atoms i e graphite related materials The fundamental concept underlying this book is that the structure and functions of these materials are principally governed by their texture The aim is to give readers a comprehensive understanding of New Carbons through the description of their structure and texture along with the properties that are largely dependent on them The Bookseller ,1912
