Simulation and Learning Franco Landriscina, 2013-03-14 The main idea of this book is that to comprehend the instructional potential of simulation and to design effective simulation based learning environments one has to consider both what happens inside the computer and inside the students minds The framework adopted to do this is model centered learning in which simulation is seen as particularly effective when learning requires a restructuring of the individual mental models of the students as in conceptual change Mental models are by themselves simulations and thus simulation models can extend our biological capacity to carry out simulative reasoning For this reason recent approaches in cognitive science like embodied cognition and the extended mind hypothesis are also considered in the book A conceptual model called the epistemic simulation cycle is proposed as a blueprint for the

comprehension of the cognitive activities involved in simulation based learning and for instructional design **E-Training Practices for Professional Organizations** Paul Nicholson, J. Erland Burkes, 2007 *Rethinking Cognitive Load Theory* Slava Kalyuga, Emeritus Professor of Educational Psychology Slava Kalyuga, Professor Paulette Goddard Chair in Digital Media and Learning Sciences Jan L Plass, 2025-09-19 Cognitive load theory CLT considers instructional implications of characteristics of human cognition such as processing limitations of working memory and the size and organization of the learner s knowledge base in long term memory CLT traditionally described how the limited capacity of working memory may cause cognitive overload and inhibit learning Rethinking Cognitive Load Theory reflects on recent developments of this theory and proposes some essential modifications to improve its effectiveness in designing modern technology based complex learning environments The book describes a way of reconceptualizing the theory so that it can better account for the multifaceted nature of learner cognition that has emerged in recent research It considers complex learning tasks as involving various goals of learner activities that need combining

cognitive motivational and affective perspectives The book starts with a review of basic tenets of the current understanding of CLT including major components of human cognitive architecture their characteristics and effects on cognitive load It summarizes the modifications that have been made to CLT to date including redefining types of cognitive load and applying an evolutionary approach The criticisms of the theory that have been expressed over the years are reviewed and possible modifications to CLT that could enhance its usability are explored The book considers existing instructional theories e g problem first productive failure or invention learning as evidence for the goal driven approach and offers examples of specific learning tasks and related motivational and affective goals of learner activities to illustrate the goal driven approach to CLT using simulation and game based learning environments Finally the book provides theoretical and practical implications of the proposed new approach This reframing of CLT is expected to result in a more learner centered framework in accordance with recent trends in instructional science and educational technology
