Spatial Database Systems Albert K.W. Yeung,G. Brent Hall,2007-05-23 The decision to write this book was motivated by a number of factors First although several useful textbooks on spatial databases have recently been published this is an area of spatial information science that has lagged somewhat behind the rapid advances of the technology and the profusion of books on domain specific applications Second much of the information pertaining to spatial database technologies is only available in scattered journal papers and conference proceedings and prior to this book no single effort has been made to sift through this expansive literature and unite the key contributions in a single volume The

tasks of sourcing and coherently integrating relevant contributions is daunting for students many of whom have a substantial number of competing demands placed on them This book should make the task of knowledge building less daunting Third and perhaps most importantly an apparent trend in many spatial information science programs is to focus from first or second year undergraduate through to fourth year courses on learning to work confidently and independently with increasingly complex software tools Hence many courses are technical in nature and while they continue to produce technically adept students knowledge of the broader aspects of spatial databases is often not as complete as it might be among graduates Some programs have sought to address this by introducing courses that focus on spatial data management However these courses are largely unsupported by a relevant and contemporary textbook
