## Fundamentals of Experimental Design

What is measured during a controlled experiment?

### Why?

Working in the science lab can be a lot of fun. Mixing random chemicals and burning stuff just to see what happens can be entertaining (and possibly dangerous), but it doesn't lead to anything helpful to the scientific community. In order to be helpful to the community, a researcher's work in the lab must be systematic. A researcher usually asks a question and then designs an experiment to investigate that question. In this activity you will identify different types of variables that will help you design controlled experiments.

### Model 1 – Alka-Seltzer® and Vinegar

- Briefly describe the reaction illustrated in Model 1 in one or more complete sentences.  
An Alka-Seltzer was dropped into 100.0 mL vinegar (23.5°C). The temperature changed, resulting in a 22.6°C 100.0 mL solution.
- Did the room pressure change as the reaction occurred? If yes, was there an increase or decrease?  
No, there was no change in room pressure.
- What two pieces of evidence observed during the "mix" phase of the reaction suggest that a chemical change is taking place?  
There was bubbling & the temperature was changing.
- Did the solution temperature increase or decrease during the reaction?  
The solution temperature decreased by .9°C.

scientific experiments is described in this volume which enables experimenters to reduce the number of trials run while retaining all the parameters that may influence the result The choice of ideal experiments is based on mathematical concepts but the author adopts a practical approach and uses theory only when necessary Written for experimenters by an experimenter it is an introduction to the philosophy of scientific investigation Researchers with limited time and resources at their disposal will find this text a valuable guide for solving specific problems efficiently The presentation makes extensive use of examples and the approach and methods are graphical rather than numerical All calculations can be performed on a personal computer readers are assumed to have no previous knowledge of the subject The presentation is such that the beginner may acquire a thorough understanding of the basic concepts However there is also sufficient material to challenge the advanced student The book is therefore suitable for both first and advanced courses The many examples can also be used in detail for self study or as a reference
