Johnson, Ronald Dean Riess, Jimmy Thomas Arnold, 2002 This widely used text offers a consistent level of difficulty and an early and careful introduction to Eigenvalues a topic that students often struggle with [Linear Algebra As An Introduction To Abstract Mathematics](#) Bruno Nachtergaele, Anne Schilling, Isaiah Lankham, 2015-11-30 This is an introductory textbook designed for undergraduate mathematics majors with an emphasis on abstraction and in particular the concept of proofs in the setting of linear algebra Typically such a student would have taken calculus though the only prerequisite is suitable mathematical grounding The purpose of this book is to bridge the gap between the more conceptual and computational oriented undergraduate classes to the more abstract oriented classes The book begins with systems of linear equations and complex numbers then relates these to the abstract notion of linear maps on finite dimensional vector spaces and covers diagonalization eigenspaces determinants and the Spectral Theorem Each chapter concludes with both proof writing and computational exercises **Linear Algebra** Robert J. Valenza, 2012-12-06 Based on lectures given at Claremont McKenna College this text constitutes a substantial abstract introduction to linear algebra The presentation emphasizes the structural elements over the computational for example by connecting matrices to linear transformations from the outset and prepares the student for further study of abstract mathematics Uniquely among algebra texts at this level it introduces group theory early in the discussion as an example of the rigorous development of informal axiomatic systems [Linear Algebra](#) Alun Owen Morris, 1978
