The ITIL guiding principles

Guiding principle	Description
Focus on value	Everything that the organization does needs to create, directly or indirectly, a benefit to the organization. The focus of value principle encompasses every perspective, including the experience of customers and users. Do not just focus on your specific activities, but also consider what a process enables in the long term. There is a risk to be a good that is the current service process, program, project, and people that can be used to create the desired outcome.
Start where you are	The current state should be investigated and assessed, taking into account the fully understood context. Do not attempt to do everything at once. Start high, then gradually reduce complexity as you go. By organizing work into smaller, manageable pieces that can be completed and completed in a timely manner, you stand to receive a longer list of work items.
Progress iteratively with feedback	Work in small, frequent, and often visible increments of work that allow you to focus and experiment, make improvements, change, and bring together work from different projects, results, and time periods to create more effective, and increased, benefits of long-term value.
Collaborate and promote visibility	Enhancing transparency, openness, information, understanding, and trust, both internally and externally, across the organization, helps to create value.

Achieving value: costs

Real risks

Achieving desired outcomes requires resources (and therefore costs) and other associated with costs. Service providers help their customers to address outcomes and to design or take on some of the associated risks and costs. On the other hand, service relationships can introduce new risks and costs, and in some cases, can negatively affect some of the intended outcomes after supporting others.

Guerrilla Capacity Planning Neil J. Gunther,2007-01-17 In these days of shortened fiscal horizons and contracted time to market schedules traditional approaches to capacity planning are often seen by management as tending to inflate their production schedules Rather than giving up in the face of this kind of relentless pressure to get things done faster Guerrilla Capacity Planning facilitates rapid forecasting of capacity requirements based on the opportunistic use of whatever performance data and tools are available in such a way that management insight is expanded but their schedules are not A key Guerrilla concept is tactical planning whereby short range planning questions and projects are brought up in team meetings such that management is compelled to know the answer and therefore buys into capacity planning without recognizing it as such Once you have your foot in the door capacity planning methods can be refined in an iterative cycle of improvement called The Wheel of Capacity Planning

Another unique Guerrilla tool is Virtual Load Testing based on Dr Gunther's Universal Law of Computational Scaling which provides a highly cost effective method for assessing application scalability
