Reactive Internet Programming Franck Barbier,2016-04-01 Is Internet software so different from ordinary software This book practically answers this question through the presentation of a software design method based on the State Chart XML W3C standard along with Java Web enterprise Internet of Things and Android applications in particular are seamlessly specified and implemented from executable models Internet software puts forward the idea of event driven or reactive programming as pointed out in Bon r et al s Reactive Manifesto <http://www.reactivemanifesto.org> It tells us that reactivity is a must However beyond concepts software engineers require effective means with which to put reactive programming into practice This book s purpose is to outline and explain such means The lack of professional examples in the literature that illustrate how reactive software should be shaped can be quite frustrating Therefore this book helps to fill in that gap by providing in depth professional case studies that contain comprehensive details and meaningful alternatives Furthermore these case studies can be downloaded for further investigation Internet software requires higher adaptation at run time in particular After reading Reactive Internet Programming the reader therefore will be ready to enter the forthcoming Internet era
