most respected researchers since its inception present this self-contained clearly written guidebook to OCR the first comprehensive treatment of the preprocessing feature extraction and systematic description matching stages of the OCR process. Including a wealth of original research material available here for the first time, this book is both an ideal professional reference source and an excellent entry point for course work in the subject. Key features of Optical Character Recognition: Theoretical framework based on functional analysis not previously available in a detailed English language version; Extensive explanation of preprocessing theory including blurring and sampling, normalization, thinning, and binary and gray scale morphology; Intensive section on feature extraction exploring linear methods, structure analysis, and algebraic description; Original work on systematic shape description as a prerequisite to matching; Original material on elastic matching including image recognition of characters and objects. Requires only the standard undergraduate requisites of algebra, linear algebra, and advanced calculus.

**Auerbach on Optical Character Recognition** Auerbach Info, inc, 1971 Character Recognition Systems Mohamed Cheriet, Nawwaf Kharma, Cheng-Lin Liu, Ching Suen, 2007-11-27. Much of pattern recognition theory and practice, including methods such as Support Vector Machines, has emerged in an attempt to solve the character recognition problem. This book is written by very well-known academics who have worked in the field for many years and have made significant and lasting contributions. The book will no doubt be of value to students and practitioners. Sargur N Srihari, SUNY Distinguished Professor, Department of Computer Science and Engineering and Director, Center of Excellence for Document Analysis and Recognition, CEDAR, University at Buffalo, The State University of New York. The disciplines of optical character recognition and document image analysis have a history of more than forty years. In the last decade, the importance and popularity of these areas have grown enormously. Surprisingly, however, the field is not well covered by any textbook. This book has been written by prominent leaders in the field. It includes all important topics in optical character recognition and document analysis and is written in a very coherent and comprehensive style. This book satisfies an urgent need. It is a volume the community has been awaiting for a long time, and I can enthusiastically recommend it to everybody working in the area. Horst Bunke, Professor, Institute of Computer Science and Applied Mathematics, IAM, University of Bern, Switzerland. In Character Recognition Systems, the authors provide practitioners and students with the fundamental principles and state-of-the-art computational methods of reading printed texts and handwritten materials. The information presented is analogous to the stages of a computer recognition system, helping readers master the theory and latest methodologies used in character recognition in a meaningful way. This book covers Perspectives on the history, applications, and evolution of Optical Character Recognition (OCR). The most widely used pre-processing techniques, as well as methods for extracting character contours and skeletons, evaluating extracted features (both structural and statistical), Modern classification methods that are successful in character recognition (including statistical methods, Artificial Neural Networks (ANN), Support Vector Machines (SVM), structural methods, and multi-classifier methods), An overview of word and string

recognition methods and techniques Case studies that illustrate practical applications with descriptions of the methods and theories behind the experimental results Each chapter contains major steps and tricks to handle the tasks described at hand Researchers and graduate students in computer science and engineering will find this book useful for designing a concrete system in OCR technology while practitioners will rely on it as a valuable resource for the latest advances and modern technologies that aren't covered elsewhere in a single book

**Character Recognition** Minoru Mori, 2010-08-17 Character recognition is one of the pattern recognition technologies that are most widely used in practical applications This book presents recent advances that are relevant to character recognition from technical topics such as image processing feature extraction or classification to new applications including human computer interfaces The goal of this book is to provide a reference source for academic research and for professionals working in the character recognition field

**Optical Character Recognition** Stephen V. Rice, George Nagy, Thomas A. Nartker, 2012-12-06 Optical character recognition OCR is the most prominent and successful example of pattern recognition to date There are thousands of research papers and dozens of OCR products Optical Character Recognition An Illustrated Guide to the Frontier offers a perspective on the performance of current OCR systems by illustrating and explaining actual OCR errors The pictures and analysis provide insight into the strengths and weaknesses of current OCR systems and a road map to future progress Optical Character Recognition An Illustrated Guide to the Frontier will pique the interest of users and developers of OCR products and desktop scanners as well as teachers and students of pattern recognition artificial intelligence and information retrieval The first chapter compares the character recognition abilities of humans and computers The next four chapters present 280 illustrated examples of recognition errors in a taxonomy consisting of Imaging Defects Similar Symbols Punctuation and Typography These examples were drawn from large scale tests conducted by the authors The final chapter discusses possible approaches for improving the accuracy of today's systems and is followed by an annotated bibliography Optical Character Recognition An Illustrated Guide to the Frontier is suitable as a secondary text for a graduate level course on pattern recognition artificial intelligence and information retrieval and as a reference for researchers and practitioners in industry
