TOOLING

ARANDA/LASCH

Foreword by Cecil Balmond / Afterword by Sanford Kwinter

Pamphlet Architecture 27 Tooling

M Lipman

Pamphlet Architecture 27 Tooling:

Pamphlet Architecture 27: Tooling Benjamin Aranda,Chris Lasch,2006 We all know that today s architectural design has moved from the sketchpad to the screen the era of the Mayline and the drafting board now seems downright Paleolithic but techniques for using the computer not just as a tool for rendering but as a generative instrument remain woefully unexplored In Tooling the latest installment in our renowned Pamphlet Architecture series the technologically progressive young firm Aranda Lasch illustrates how advanced computational methods and algorithmic codes can be used to foster architectural design Tooling explores patterns generated by computer codes that in turn create an organizational template assembling projects By openly sharing these codes the authors seek to foster further investigation into their methods allowing other architects to model and evolve more critical and insightful geometries and patterns Pamphlet Architecture 29 Nannette Jackowski,Ricardo de Ostos,2013-07-02 Ambiguous Spaces the newest installment in the Pamphlet Architecture series and a return to Pamphlet s own progressive roots features the architectural fictions The Pregnant Island and Nuclear Breeding These two projects develop alternative urban concepts that address the challenges presented by the specific situations and social dynamics described in controversial locations such as the Brazilian Tucuruí Dam the Three Gorges Dam in China and former English nuclear test sites Using narrative techniques fictional programs ambiguous spaces and building devices Ambiguous Spaces explores people communities and even entire cities oppressed by a lack of freedom Pamphlet Architecture 36 Christopher Michael Meyer,Shawna Michelle Meyer,Daniel Hemmendinger,2018-08-28 This newest addition to the Pamphlet Architecture series long admired for its willingness to propose architectural solutions to challenging problems addresses the issue of rising sea levels with an interrogation of the concept of floating cities a field of inquiry gaining increasing relevance and urgency with the impending reality of climate change The authors explore notions of buoyancy and the amphibious through a typology based on human response and adaptation to one of the hosting pressing issues of our day **Pamphlet Architecture 28** Mark Smout,Laura Allen,2013-07-02 In 1977 Steven Holl and William Stout created a grittier alternative to mainstream architectural publishing called Pamphlet Architecture With Holl s Bridges the landmark series was born and for 30 years Pamphlet has served as soapbox and laboratory for such notable architects and theorists as Lebbeus Woods Zaha Hadid Lars Lerup and Michael Sorkin With its twenty eighth installment Pamphlet Architecture celebrates its thirtieth anniversary no less bold than when it began Augmented Landscapes features a landscape architecture practice for the first time in Pamphlet history London s Smout Allen presents five projects that respond to the way in which man has enlarged the landscape through architecture and infrastructure manipulating and blurring perceptions of what is natural and what is artificial Cybernetic Architectures Camilo Andrés Cifuentes Quin,2021-07-29 For the past 50 years the advancements of technology have equipped architects with unique tools that have enabled the development of new computer mediated design methods fabrication techniques and architectural expressions Simultaneously in

contemporary architecture new frameworks emerged that have radically redefined the traditional conceptions of design of the built environment and of the role of architects Cybernetic Architectures argues that such frameworks have been constructed in direct reference to cybernetic thinking a thought model that emerged concurrently with the origins of informatics and that embodies the main assumptions values and ideals underlying the development of computer science The book explains how the evolution of the computational perspective in architecture has been parallel to the construction of design issues in reference to the central ideas fostered by the cybernetic model It unpacks and explains this crucial relationship in the work of digital architects between the use of information technology in design and the conception of architectural problems around an informational ontology This book will appeal to architecture students and scholars interested in understanding the recent transformations in the architectural landscape related to the advent of computer based design paradigms
