

Solutions to Assignment #4 Chapter 5

5. The critical path lengths of an unfolded DFG only increase when a new arc is generated with no delays in the DFG; otherwise the path lengths remain the same. An arc with D delays in the original DFG produces $J-D$ arcs with no delays in the J -unfolded DFG when $J > D$.

If $J > D$, then the J unfolded graph will contain an additional arc without delays, and the path length for the J -unfolded DFG increases through those nodes, compared to the $(J-1)$ unfolded DFG.

Therefore, the critical path of the J -unfolded graph is greater than or equal to that of the $(J-1)$ unfolded graph.

7. The DFG is given as

The computation for the critical path $A \rightarrow B \rightarrow E$ is given as $12 \text{ u.t.} = T_{crit}^0$.

Following the algorithm given in Problem 6, we have:

$$T_{crit}^0 = 2 + 5 + 5 = 12;$$

$$J' = \left\lceil \frac{12}{8} \right\rceil = 2$$

Applying unfolding of degree 2 we get

Pipelined Lattice and Wave Digital Recursive Filters Jin-Gyun Chung, Keshab K. Parhi, 2012-12-06 Pipelined Lattice and Wave Digital Recursive Filters uses look ahead transformation and constrained filter design approaches It is also shown that pipelining often reduces the roundoff noise in a digital filter The pipelined recursive lattice and wave digital filters presented are well suited where increasing speed and reducing area or power or roundoff noise are important Examples are wireless and cellular codec applications where low power consumption is important and radar and video applications where higher speed is important The book presents pipelining of direct form recursive digital filters and demonstrates the usefulness of these topologies in high speed and low power applications It then discusses fundamentals of scaling in the design of lattice and wave digital filters Approaches to designing four different types of lattice digital filters are discussed including basic one multiplier normalized and scaled normalized structures The roundoff noise in these lattice filters is also studied The book then presents approaches to the design of pipelined lattice digital filters for the same four types of structures followed by pipelining of orthogonal double rotation digital filters which eliminate limit cycle problems A discussion of pipelining of lattice wave digital filters follows showing how linear phase narrow band sharp transition recursive filters can be implemented using this structure This example is motivated by a difficult filter design problem in a wireless codec application Finally pipelining of ladder wave digital filters is discussed Pipelined Lattice and Wave Digital Recursive Filters serves as an excellent reference and may be used as a text for advanced courses on the subject

Accelerator Data-Path Synthesis for High-Throughput Signal Processing Applications Werner Geurts, Francky Catthoor, Serge Vernalde, Hugo De Man, 2011-06-27 Accelerator Data Path Synthesis for High Throughput Signal Processing Applications is the first book to show how to use high level synthesis techniques to cope with the stringent timing requirements of complex high throughput real time signal and data processing The book describes the state of the art in architectural synthesis for complex high throughput real time processing Unlike many other the Synthesis approach used in this book targets an architecture style or an application domain This approach is thus heavily application driven and this is illustrated in the book by several realistic demonstration examples used throughout Accelerator Data Path Synthesis for High Throughput Signal Processing Applications focuses on domains where application specific high speed solutions are attractive such as significant parts of audio telecom instrumentation speech robotics medical and automotive processing image and

video processing TV multi media radar sonar etc Moreover it addresses mainly the steps above the traditional scheduling and allocation tasks which focus on scalar operations and data Accelerator Data Path Synthesis for High Throughput Signal Processing Applications is of interest to researchers senior design engineers and CAD managers both in academia and industry It provides an excellent overview of what capabilities to expect from future practical design tools and includes an extensive bibliography
