Zoo Animals Geoffrey R. Hosey, Vicky Melfi, Sheila Pankhurst, 2009 **Increasing Legal Rights for Zoo Animals** Jesse Donahue, 2017-04-12 We are on the precipice of momentous legal changes for animals that may soon give some of them rights of personhood and citizenship Companion animals in particular are gaining rights to public representation in government access to housing inheritance and increased protection through the criminal justice system Nonhuman primates used as research subjects are also gaining limited rights of personhood in some countries This book examines how zoo animals could benefit from that revolution as well Reviewing zoo law and politics in the United States New Zealand and Southeast Asia scholars and zoo directors grapple with how the current law in those regions of the world impacts zoo animals and how it could be changed to serve them better They discuss the ways in which zoo animals could benefit from some reworked companion animal law in the United States the challenges of reintroductions and their legal barriers how we can extend ideas of human research subject rights to zoo animal research the stark problems of too few animal welfare laws in South East Asia the need for a central governing body focused solely on exotic captive animals in New Zealand and the need for stricter laws preventing the exotic pet problem that is increasingly affecting both zoos and sanctuaries The book starts a dialogue that moves the scholarship about zoos beyond a general discussion of ethics to a concrete dialogue and set of suggestions about how to extend legal rights to this group of animals *Human-Animal Interactions in Zoos* Eduardo J. The Welfare and Management of Wild Animals in Captivity, 1973 [The Welfare and Management of Bears in Zoological Gardens](#) Alison Ames, 1994 **Zoo Animals** Sarah Corbett, 2018

This book begins by suggesting that maintaining biologically functional and compatible social groups is a primary welfare concern for zoo housed animals An overview of the welfare impact of social groupings of a number of zoo housed animals is presented and the extent to which zoos are able to cater for individual species needs is discussed The opening chapter concludes by outlining areas for further research into factors that may affect the social compatibility of zoo housed animals and discusses the potential long term implications for housing socially complex animals Next the authors explore the evidence surrounding the use of ambassador animals in zoo education programmes The reported impact of ambassador animal programmes on zoo visitors in terms of visitor learning attitude and behaviours are reviewed and areas for further research are highlighted The subsequent chapter covers how quality of life can be measured and evaluated in the zoo It will also discuss aspects of welfare compromise and how research into species behaviour allows us to rectify issues that may cause a poorer quality of life The use of natural history information e.g behavioural ecology evolutionary adaptations and life history strategy to the planning design and implementation of husbandry protocols is explained and reviewed Later the authors suggest that if zoos are to improve their effectiveness at conservation they should consider the application of cognitive enrichment a type of occupational enrichment where significant cognitive challenge is provisioned over a protracted timeframe to ensure cognitive enrichment remains Learning is considered the key to improving both individual welfare and species or population conservation Afterwards several key examples of folklore husbandry that may currently be impacting captive management in zoos are examined focusing particularly on the provision of environmental parameters and elements of exhibit design These keeping practices are interpreted and evaluated in light of current biological and captive management studies to identify and address areas of husbandry that can be improved upon In the closing chapter the authors suggest that if zoo managers know little about the biology and ecology of a species it is

unlikely they are able to provide them with captive conditions that represent optimal welfare Although zoos are now more committed to research than they were in the past the research they have undertaken so far has mostly been focussed on a few taxa which represents a small proportion of the diverse collection of species kept by them [A Guide to Managing Zoo Animal Welfare](#) Jason Watters, Bethany L.
