

# GEOPHYSICAL METHODS OF EXPLORATION

## CORE DRILLING

Core drilling can be considered both a geological and geophysical technique and can be used to determine the true vertical configuration of a target. The information and accuracy of the results are the foundation of seismic. Core drilling also provides the location of structural trap potential. Core drills are used frequently to measure aquifer thickness where the existing data is sparse (needed to correct downward time to depth). The two locations are determined and corrected by continuous and intermittent monitoring of continuous monitoring (continuous and intermittent) vertical profile. During operations at the first significant well depth, vertical coverage throughout completion time and to provide every detail.

## SEISMIC

Seismic techniques have recently had a major impact on the industry. They are used to determine the true vertical configuration of a target. The information and accuracy of the results are the foundation of seismic. Core drilling also provides the location of structural trap potential. Core drills are used frequently to measure aquifer thickness where the existing data is sparse (needed to correct downward time to depth). The two locations are determined and corrected by continuous and intermittent monitoring of continuous monitoring (continuous and intermittent) vertical profile. During operations at the first significant well depth, vertical coverage throughout completion time and to provide every detail.

## MAGNETIC TECHNIQUES

The magnetic method of geophysical exploration is used to determine the true vertical configuration of a target. The information and accuracy of the results are the foundation of seismic. Core drilling also provides the location of structural trap potential. Core drills are used frequently to measure aquifer thickness where the existing data is sparse (needed to correct downward time to depth). The two locations are determined and corrected by continuous and intermittent monitoring of continuous monitoring (continuous and intermittent) vertical profile. During operations at the first significant well depth, vertical coverage throughout completion time and to provide every detail.

## ELECTRICAL TECHNIQUES

Electrical methods of geophysical exploration are used to determine the true vertical configuration of a target. The information and accuracy of the results are the foundation of seismic. Core drilling also provides the location of structural trap potential. Core drills are used frequently to measure aquifer thickness where the existing data is sparse (needed to correct downward time to depth). The two locations are determined and corrected by continuous and intermittent monitoring of continuous monitoring (continuous and intermittent) vertical profile. During operations at the first significant well depth, vertical coverage throughout completion time and to provide every detail.

## REMOTE SENSING

Remote sensing methods of geophysical exploration are used to determine the true vertical configuration of a target. The information and accuracy of the results are the foundation of seismic. Core drilling also provides the location of structural trap potential. Core drills are used frequently to measure aquifer thickness where the existing data is sparse (needed to correct downward time to depth). The two locations are determined and corrected by continuous and intermittent monitoring of continuous monitoring (continuous and intermittent) vertical profile. During operations at the first significant well depth, vertical coverage throughout completion time and to provide every detail.

**CONCLUSIONS**  
 Geophysical methods of exploration are used to determine the true vertical configuration of a target. The information and accuracy of the results are the foundation of seismic. Core drilling also provides the location of structural trap potential. Core drills are used frequently to measure aquifer thickness where the existing data is sparse (needed to correct downward time to depth). The two locations are determined and corrected by continuous and intermittent monitoring of continuous monitoring (continuous and intermittent) vertical profile. During operations at the first significant well depth, vertical coverage throughout completion time and to provide every detail.
