Heating and Cooling of Buildings Jan F. Kreider, Peter S. Curtiss, Ari Rabl, 2009-12-28 The art and the science of building systems design evolve continuously as designers practitioners and researchers all endeavor to improve the performance of buildings and the comfort and productivity of their occupants Retaining coverage from the original second edition while updating the information in electronic form *Heating and Cooling of Buildings Design for Efficiency Revised Second Edition* presents the technical basis for designing the lighting and mechanical systems of buildings Along with numerous homework problems the revised second edition offers a full chapter on economic analysis and optimization new heating and cooling load procedures and databases and simplified procedures for ground coupled heat transfer calculations The accompanying CD ROM contains an updated version of the Heating and Cooling of Buildings HCB software program as well as electronic appendices that include over 1 000 tables in HTML format that can be searched by major categories a table list or an index of topics Ancillary information is available on the book s website www.hcbcentral.com From materials to computers this edition explores the latest technologies exerting a profound effect on the design and operation of buildings Emphasizing design optimization and critical thinking the book continues to be the ultimate resource for understanding energy use in buildings

Solutions Manual -- Heating and Cooling of Buildings CRC Press, Jan Kreider, 2009-12-23 Heating and Cooling of Buildings Jan F. Kreider, Peter Curtiss, Ari Rabl, 2002 *Heating and Cooling of Buildings Second Edition* by Kreider and Rable covers technologies from materials to computers that are exerting a profound effect on the design and operation of buildings Numerous examples are presented and solved to reinforce important concepts and software applications are integrated throughout The contents of this edition have been expanded to include a chapter on economic analysis and optimization new heating and cooling load procedures more than 200 new homework problems and new and simplified procedures for ground coupling heat transfer calculations One of the most notable difference in the second edition of this book is that many of the appendices from the first edition of this book have been moved to the accompanying CD ROM The CD ROM amounts to a searchable database of tables charts and information on building codes For example there are more than 1 000 tables in the electronic appendices that can be searched by major categories a table list or an index of topics The CD also directs students to the central web site where several hundred links are maintained to help students find manufacturer and government data browse in newsgroups and find any corrections and updates to the text and data tables Students have come to expect this kind interaction through Internet searches Heating and Cooling of Buildings T. Reddy, Jan F. Kreider, Peter S. Curtiss, Ari Rabl, 2016-09-01 *Heating and Cooling of Buildings Principles and Practice of Energy Efficient Design Third Edition* is structured to provide a rigorous and comprehensive technical foundation and coverage to all the various elements inherent in the design of energy efficient and green buildings Along with numerous new and revised examples design case studies and homework problems the third edition includes the HCB software along with its extensive website material which contains a

wealth of data to support design analysis and planning Based around current codes and standards the Third Edition explores the latest technologies that are central to design and operation of today s buildings It serves as an up to date technical resource for future designers practitioners and researchers wishing to acquire a firm scientific foundation for improving the design and performance of buildings and the comfort of their occupants For engineering and architecture students in undergraduate graduate classes this comprehensive textbook

Heating and Cooling of Buildings: Design for Efficiency Kreider,Rabl,2001-05-08

Urban Heat Stress and Mitigation Solutions Vincenzo Costanzo,Gianpiero Evola,Luigi Marletta,2021-09-08 This book provides the reader with an understanding of the impact that different morphologies construction materials and green coverage solutions have on the urban microclimate thus affecting the comfort conditions of urban inhabitants and the energy needs of buildings in urban areas The book covers the latest approaches to energy and outdoor comfort measurement and modelling on an urban scale and describes possible measures and strategies to mitigate the effects of the mutual interaction between urban settlements and local microclimate Despite its relevance only limited literature is currently devoted to appraising from an engineering perspective the intertwining relationships between urban geometry and fabrics energy fluxes between buildings and their surroundings outdoor microclimate conditions and building energy demands in urban areas This book fills this gap by first discussing the physical processes that govern heat and mass transfer at an urban scale while emphasizing the role played by different spatial arrangements manmade materials and green infrastructures on the outdoor microclimate The first chapters also address the implications of these factors on the outdoor comfort conditions experienced by pedestrians and on the buildings energy demand for space heating and cooling Then based upon cutting edge experimental activities and simulation work this book demonstrates current and forthcoming adaptation and mitigation strategies to improve the urban microclimate and its impact on the built environment such as cool materials thermochromic and retroreflective finishing materials and green infrastructures applied either at a building scale or at the urban scale The effect of these solutions is demonstrated for different cities worldwide under a range of climate conditions Finally the book opens a wider perspective by introducing the basic elements that allow fuel poverty raw materials consumption and the principles of circular economy in the definition of a resilient urban settlement

Solution Sets for Net Zero Energy Buildings Françios Garde,Joseph Ayoub,Laura Aelenei,Daniel Aelenei,Alessandra Scognamiglio,2017-03-01 Net Zero Energy Buildings have been the object of numerous studies in recent years as various countries have set this performance level as a long term goal of their energy policies This book presents a unique study of 30 NZEBs that have been constructed and have had their performance measured for at least 12 months The study is based upon an international collaborative research initiated by the International Energy Agency the Solar Heating and Cooling Programme SHC It is the first book to evaluate building strategies in houses educational buildings and offices that have been demonstrated to work in practice It examines how the design challenges of climate and building type have been addressed and to what extent the

various design approaches have been successful This book presents convincing evidence that a careful re thinking of conventional design norms can achieve a far greater performance benefit than is normally feasible It identifies solution sets that work at the whole building level and at the individual building design challenge level for each climate and building type In doing so the book provides guidance as to how to improve the design by learning from these cases Unusually for a book of this type it has examples of buildings in what are conventionally labeled hot and cold climates A simple process is proposed for the reader to commission the analysis of their own climate to assess not only the conventional measure of how hot or cold or humid it is but also to assess its suitability to support other NZEB technical challenge solutions sets such as Daylight or Natural Ventilation or comfort based climate conditioning *Mechanical and Electrical Equipment for Buildings* Walter T. Grondzik, Alison G. Kwok, Benjamin Stein, John S. Reynolds, 2011-01-31 For more than half a century this book has been a fixture in architecture and construction firms the world over Twice awarded the AIA s Citation for Excellence in International Architecture Book Publishing *Mechanical and Electrical Equipment for Buildings* is recognized for its comprehensiveness clarity of presentation and timely coverage of new design trends and technologies Addressing mechanical and electrical systems for buildings of all sizes it provides design guidelines and detailed design procedures for each topic covered Thoroughly updated to cover the latest technologies new and emerging design trends and relevant codes this latest edition features more than 2 200 illustrations 200 new to this edition and a companion Website with additional resources
