reactor type VISION is comprised of several Microsoft Excel input files a Powersim Studio core and several Microsoft Excel output files All must be co located in the same folder on a PC to function You must use Powersim Studio 8 or better We have tested VISION with the Studio 8 Expert Executive and Education versions The Expert and Education versions work with the number of reactor types of 3 or less For more reactor types the Executive version is currently required The input files are Excel2003 format xls The output files are macro enabled Excel2007 format xlsx VISION 3 4 was designed with more flexibility than previous versions which were structured for only three reactor types LWRs that can use only uranium oxide UOX fuel LWRs that can use multiple fuel types LWR MF and fast reactors One could not have for example two types of fast reactors concurrently The new version allows 10 reactor types and any user defined uranium plutonium fuel is allowed Thorium based fuels can be input but several features of the model would not work The user identifies by year the primary fuel to be used for each reactor type The user can identify for each primary fuel a contingent fuel to use if the primary fuel is not available e g a reactor designated as using mixed oxide fuel MOX would have UOX as the contingent fuel Another example is that a fast reactor using recycled transuranic TRU material can be designated as either having or not having appropriately enriched uranium oxide as a contingent fuel Because of the need to study evolution in recycling and separation strategies the user can now select the recycling strategy and separation technology by year
