How to Solve Large Linear Systems Aleksa Srdanov, Aleksandra Jankovic, 2019-12-01 Solving the linear equation system  $n \times n$  can also be a problem for a computer even when the number of equations and unknowns is relatively small a few hundred All existing methods are burdened by at least one of the following problems 1 Complexity of computation expressed through the number of operations required to be done to obtaining solution 2 Unrestricted growth of the size of the intermediate result which causes overflow and underflow problems 3 Changing the value of some coefficients in the input system which causes the instability of the solution 4 Require certain conditions for convergence etc In this paper an approximate and exact methods for solving a system of linear equations with an arbitrary number of equations and the same number of unknowns is presented All the mentioned problems can be avoided by the proposed methods It is possible to define an algorithm that does not solve the system of equations in the usual mathematical way but still finds its exact solution in the exact number of steps already defined The methods consist of simple computations that are not cumulative At the same time the number of operations is acceptable even for a relatively large number of equations and unknowns In addition the algorithms allows the process to start from an arbitrary initial  $n$  tuple and always leads to the exact solution if it exists

**Explorations of Mathematical Models in Biology with Maple** Mazen Shahin, 2014-10-07 Explore and analyze the solutions of mathematical models from diverse disciplines As biology increasingly depends on data algorithms and models it has become

necessary to use a computing language such as the user friendly Maple™ to focus more on building and analyzing models as opposed to configuring tedious calculations Explorations of Mathematical Models in Biology with Maple provides an introduction to model creation using Maple followed by the translation analysis interpretation and observation of the models With an integrated and interdisciplinary approach that embeds mathematical modeling into biological applications the book illustrates numerous applications of mathematical techniques within biology ecology and environmental sciences Featuring a quantitative computational and mathematical approach the book includes Examples of real world applications such as population dynamics genetics drug administration interacting species and the spread of contagious diseases to showcase the relevancy and wide applicability of abstract mathematical techniques Discussion of various mathematical concepts such as Markov chains matrix algebra eigenvalues eigenvectors first order linear difference equations and nonlinear first order difference equations Coverage of difference equations to model a wide range of real life discrete time situations in diverse areas as well as discussions on matrices to model linear problems Solutions to selected exercises and additional Maple codes Explorations of Mathematical Models in Biology with Maple is an ideal textbook for undergraduate courses in mathematical models in biology theoretical ecology bioeconomics forensic science applied mathematics and environmental science The book is also an excellent reference for biologists ecologists mathematicians biomathematicians and environmental and resource economists
