Basic Algebra II Second Edition Nathan Jacobson:

Basic Algebra II Nathan Jacobson, 2009-07-22 A classic text and standard reference for a generation this volume and its companion are the work of an expert algebraist who taught at Yale for more than three decades Nathan Jacobson's books possess a conceptual and theoretical orientation in addition to their value as classroom texts they serve as valuable references Volume II comprises all of the subjects usually covered in a first year graduate course in algebra Topics include categories universal algebra modules basic structure theory of rings classical representation theory of finite groups elements of homological algebra with applications commutative ideal theory and formally real fields In addition to the immediate introduction and constant use of categories and functors it revisits many topics from Volume I with greater depth and sophistication Exercises appear throughout the text along with insightful carefully explained proofs

Basic Algebra II Nathan Jacobson, 1989

A Brief Introduction to Theta Functions Richard Bellman, 2013-01-01 Originally published New York Rinehart and Winston 1961

Algebraic Logic Paul R. Halmos, 2016-03-17 Beginning with an introduction to the concepts of algebraic logic this concise volume features ten articles by a prominent mathematician that originally appeared in journals from 1954 to 1959 Covering monadic and polyadic algebras these articles are essentially self contained and accessible to a general mathematical audience requiring no specialized knowledge of algebra or logic Part One addresses monadic algebras with articles on general theory representation and freedom Part Two explores polyadic algebras progressing from general theory and terms to equality Part Three offers three items on polyadic Boolean algebras including a survey of predicates terms operations and equality The book concludes with an additional bibliography and index

Basic Algebra I Nathan Jacobson, 2009-06-22 A classic text and standard reference for a generation this volume and its companion are the work of an expert algebraist who taught at Yale for two decades Nathan Jacobson's books possess a conceptual and theoretical orientation and in addition to their value as classroom texts they serve as valuable references Volume I explores all of the topics typically covered in undergraduate courses including the rudiments of set theory group theory rings modules Galois theory polynomials linear algebra and associative algebra Its comprehensive treatment extends to such rigorous topics as Lie and Jordan algebras lattices and Boolean algebras Exercises appear throughout the text along with insightful carefully explained proofs Volume II comprises all subjects customary to a first year graduate course in algebra and it revisits many topics from Volume I with greater depth and sophistication

Dynamical Systems Shlomo Sternberg, 2014-06-10 A pioneer in the field of dynamical systems discusses one dimensional dynamics differential equations random walks iterated function systems symbolic dynamics and Markov chains Supplementary materials include PowerPoint slides and MATLAB exercises 2010 edition

Interpolation and Approximation Philip J. Davis, 1975-01-01 Intermediate level survey covers remainder theory convergence theorems and uniform and best approximation Other topics include least square approximation Hilbert space orthogonal polynomials theory of closure and completeness and more 1963 edition

Basic Algebra II Nathan

Jacobson,2009-07-22 This classic text and standard reference comprises all subjects of a first year graduate level course including in depth coverage of groups and polynomials and extensive use of categories and functors 1989 edition

Beginning Statistics with Data Analysis Frederick Mosteller,Stephen E. Fienberg,Robert E.K. Rourke,2013-11-20 This introduction to the world of statistics covers exploratory data analysis methods for collecting data formal statistical inference and techniques of regression and analysis of variance 1983 edition

Geometric Algebra Emil Artin,2016-01-20 This concise classic presents advanced undergraduates and graduate students in mathematics with an overview of geometric algebra The text originated with lecture notes from a New York University course taught by Emil Artin one of the preeminent mathematicians of the twentieth century The Bulletin of the American Mathematical Society praised Geometric Algebra upon its initial publication noting that mathematicians will find on many pages ample evidence of the author s ability to penetrate a subject and to present material in a particularly elegant manner Chapter 1 serves as reference consisting of the proofs of certain isolated algebraic theorems Subsequent chapters explore affine and projective geometry symplectic and orthogonal geometry the general linear group and the structure of symplectic and orthogonal groups The author offers suggestions for the use of this book which concludes with a bibliography and index
