Handbook of High-Frequency Trading and Modeling in Finance Ionut Florescu, Maria Cristina Mariani, H. Eugene Stanley, Frederi G. Viens, 2016-04-05

Reflecting the fast pace and ever-evolving nature of the financial industry, the Handbook of High Frequency Trading and Modeling in Finance details how high frequency analysis presents new systematic approaches to implementing quantitative activities with high frequency financial data. Introducing new and established mathematical foundations necessary to analyze realistic market models and scenarios, the handbook begins with a presentation of the dynamics and complexity of futures and derivatives markets, as well as a portfolio optimization problem using quantum computers. Subsequently, the handbook addresses estimating complex model parameters using high frequency data. Finally, the handbook focuses on the links between models used in financial markets and models used in other research areas such as geophysics, fossil records, and earthquake studies. The Handbook of High Frequency Trading and Modeling in Finance also features contributions by well-known experts within the academic, industrial, and regulatory fields. A well-structured outline on the various data analysis methodologies used to identify new trading opportunities, newly emerging quantitative tools that address growing concerns relating to high frequency data such as stochastic volatility and volatility tracking, stochastic jump processes for limit order books, and broader market indicators and options markets. Practical applications using real world data to help readers better understand the presented material. The Handbook of High Frequency Trading and Modeling in Finance is an excellent reference for professionals in the fields of business, applied statistics, econometrics, and financial engineering. The handbook is also a good supplement for graduate and MBA level courses on quantitative finance, volatility, and financial econometrics.

Ionut Florescu PhD is Research Associate Professor in Financial Engineering and Director of the Hanlon Financial Systems Laboratory at Stevens Institute of Technology. His research interests include stochastic volatility, stochastic partial differential equations, Monte Carlo Methods, and numerical methods for stochastic processes. Dr. Florescu is the author of Probability and Stochastic Processes, the coauthor of Handbook of Probability, and the coeditor of Handbook of Modeling High Frequency Data in Finance, all published by Wiley.

Grey relational analysis method for SVTrNN based multi-attribute decision making with partially known or

completely unknown weight information Bibhas C. Giri, Mahatab Uddin Molla, Pranab Biswas, Single valued trapezoidal neutrosophic number SVTrNN an extension of single valued neutrosophic set effectively deals with indeterminate and incomplete information in multi attribute decision making MADM problem In this paper we extend the grey relational analysis GRA method for solving SVTrNN based MADM problem where the weight information of attributes is partially known or completely unknown Following the classical GRA method we define grey relational co efficient using a new distance measure We develop two optimization models to determine the weights of the attributes We calculate grey positive and negative relational degrees and define the relative closeness co efficient of each alternative to determine the best alternative
