demand for programmers is that most traditional computer programming classes are targeted to university college students with strong math backgrounds To expand the computer programming workforce we need to encourage a wider range of students to learn about programming The goal of this research is to design and implement a gesture driven interface to teach computer programming to young and non traditional students We designed our user interface based on the feedback from students attending the College of Engineering summer camps at the University of Arkansas Our system uses the Microsoft Xbox Kinect to capture the movements of new programmers as they use our system Our software then tracks and interprets student hand movements in order to recognize specific gestures which correspond to different programming constructs and uses this information to create and execute programs using the Google Blockly visual programming framework We focus on various gesture recognition algorithms to interpret user data as specific gestures including template matching sector quantization and supervised machine learning clustering algorithms **Google Book: What is a Pangolin?**.
