Filtering the Web to Feed Data Warehouses Witold Abramowicz, Pawel J. Kalczyński, Krzysztof Węcel, 2002-07-24. Information is a key factor in business today and data warehousing has become a major activity in the development and management of information systems to support the proper flow of information. Unfortunately, the majority of information systems are based on structured information stored in organizational databases, which means that the company is isolated from the business environment by concentrating on their internal data sources only. It is therefore vital that organizations take advantage of external business information which can be retrieved from Internet services and mechanically organized within the existing information structures. Such a continuously extending integrated collection of documents and data could facilitate decision-making processes in the organization. *Filtering the Web to Feed Data Warehouses* discusses areas such as how to use data warehouse for filtering Web content, how to retrieve relevant information from diverse sources on the Web, how to handle the time aspect, how to mechanically establish links among data warehouse structures and documents filtered from external sources, how to use collected information to increase corporate knowledge, and gives a comprehensive example illustrating the idea of supplying data warehouses with relevant information filtered from the Web.

Then, in chapters 7 through 10, you learn how to populate the data warehouse, for example, extracting from source systems, loading the data stores, maintaining data quality, and utilizing the metadata. After you populate the data warehouse, in chapters 11 through 15, you explore how to present data to users using reports and multidimensional databases and how to use the data in the data warehouse for business intelligence, customer relationship management, and other purposes. Chapters 16 and 17 wrap up the book. After you have built your data warehouse, before it can be released to production, you need to test it thoroughly. After

provides a wider managerial perspective on the implications of obtaining better information about the whole business. The customer-centric knowledge-based info structure changes the way that companies do business and it is likely to alter the structure of the organization, the way it is staffed and even how its management and employees behave. Organizational changes affect the way the marketing department works and the way that it is perceived within the organization. Effective communications with prospects, customers, alliance partners, competitors, the media and through individualized feedback mechanisms creates a whole new image for marketing and new opportunities for marketing successes. Chapter 14 provides examples of companies that have transformed their marketing principles into CRM practices and are engaging more and more customers in long-term satisfaction and higher per customer profitability. In the title of this book and throughout its pages I have used the phrase Relationship Technologies to describe the increasingly sophisticated data warehousing and business intelligence technologies that are helping companies create lasting customer relationships, therefore improving business performance. I want to acknowledge that this phrase was created and protected by NCR Corporation and I use this trademark throughout this book with the company's permission. Special thanks and credit for developing the Relationship Technologies concept goes to Dr. Stephen Emmott of NCR's acclaimed Knowledge Lab in London. As time marches on, there is an ever-increasing velocity with which we communicate, interact, position and involve ourselves and our customers in relationships. To increase your Return on Investment (ROI), the right information and relationship technologies are critical for effective Customer Relationship Management. It is now possible to know who your customers are and who your best customers are, stimulate what they buy or know what they won't buy, time when and how they buy, learn customers' preferences and make them loyal customers, define characteristics that make up a great, profitable customer model, channels are best to address a customer's needs, predict what they may or will buy in the future, keep your best customers for many years. This book features many companies using CRM, decision support, marketing databases and data warehousing techniques to achieve a positive ROI using customer-centric knowledge bases. Success begins with understanding the scope and processes involved in true CRM and then initiating appropriate actions to create and move forward into the future. Walking the talk differentiates the perennial ongoing winners. Reinvestment in success generates growth and opportunity. Success is in our ability to learn from the past, adopt new ideas and actions in the present and to challenge the future. Respectfully, Ronald S. Swift, Dallas, Texas, June 2000.
