

Scale Drawing

A **scale drawing** is a representation of an object shown at a different size than its actual size while keeping the same proportions as the original object.

A scale drawing is created by multiplying each length by a **scale factor** to make it larger (an **enlargement**) or smaller (a **reduction**) than the original object.

The scale of a drawing is usually stated as a **ratio**.

To do this you need to know the scale factor and the actual lengths of the object or the scale diagram.

Example Below is a scale drawing of a rectangular pool with a scale of 1cm:2m or 1:200.

Every centimeter on the scale drawing represents 2 meters in real life.
