Morer, Vincenzo Nigrelli, 2019-04-27 This book contains the papers presented at the International Joint Conference on

Mechanics Design Engineering and Advanced Manufacturing JCM 2018 held on 20-22 June 2018 in Cartagena Spain. It reports on cutting edge topics in product design and manufacturing such as industrial methods for integrated product and process design, innovative design and computer aided design. Further topics covered include virtual simulation and reverse engineering, additive manufacturing, product manufacturing engineering methods in medicine and education, representation techniques and nautical aeronautics and aerospace design and modeling. The book is divided into six main sections reflecting the focus and primary themes of the conference. The contributions presented here will not only provide researchers, engineers and experts in a range of industrial engineering subfields with extensive information to support their daily work, they are also intended to stimulate new research directions, advanced applications of the methods discussed and future interdisciplinary collaborations.

**Product Design and Testing for Automotive Engineering: Volume II** Young J. Chiang, Amy L. Chiang, 2024-09-17. Failure modes and effects analysis (FMEA), Reliability Product Development, Design Process Test Procedures. Explore Product Design and Testing for Automotive Engineering Volume II, an essential guide reshaping vehicle manufacturing with unprecedented reliability. As part of SAE International's DOE for Product Reliability Growth series, this practical resource introduces cutting edge methodologies crucial for predicting and improving product reliability in an era of automotive electrification. The book navigates statistical tolerance design, showcasing how variability in part fabrication and assembly can enhance reliability and sustainability. Key topics include Statistical tolerance design's impact on manufacturing and material selection, focusing on non-normal distributions, effects on product assembly and cost. Methods like maximum likelihood estimators and Monte Carlo simulations are used for assembly strategy synthesis. Reliability DOEs using log location scale distributions to estimate lifetimes of non-normally distributed components, especially in accelerated life testing. It covers transformations optimizing parts and system designs under the lognormal distribution, Weibull distribution, DOE W for characterizing lifetimes affected by various failure modes, detailing parameter assessment methods and real world applications. The book also introduces reliability design of experiments based on the exponential distribution, DOE E. Importance of predicting lifecycles and enhancing reliability through qualitative and stepwise accelerated life tests. Integration of physics of failure with statistical methods like Weibull statistics and lognormal approximation enhances analysis credibility. Inferential mechanisms such as the Arrhenius and Eyring models in predicting automotive component lifecycles, refining product life prediction based on reliability DOEs. Whether you're an engineer, researcher or automotive professional, this book equips you to navigate reliability engineering confidently. Revolutionize your approach to product design and testing with Product Design and Testing for Automotive Engineering, your definitive companion in shaping the future of automotive reliability.
