Brent, 1998 In 1988 the American Chemical Society released the first edition of the *Chemistry in the Community ChemCom* materials ChemCom is a year long secondary chemistry course developed for capable students who do not intend to pursue a science or engineering related career During the decade that has elapsed since that first edition two other editions have been released 1992 1996 The program uses an issues oriented science technology and society STS approach The chemistry is taught with a need to know spiral approach The approach is not the only change ChemCom makes from the traditional high school program Some topics common to the conventional program are eliminated and others de emphasized and the amount

of mathematical calculations is reduced. Some topics not commonly included in high school chemistry are introduced. These changes have led to the perception by some high school and higher education chemistry teachers that students taking ChemCom would not be as well prepared for all introductory university chemistry course for science related majors as students from a traditional chemistry course. This perception led to a variety of concerns about scheduling students in high school classes and about including ChemCom in the curriculum. The purpose of this study is to examine the validity of this perception. The sample consists of forty three students with ChemCom as their high school chemistry background and forty three students with a traditional chemistry background. All of the students were taking the Chemistry 31 course at a research I university. The non ChemCom students were matched with the ChemCom students based on the number of mathematics and science courses taken in high school. No statistically significant difference was found between the two groups of students using an ANOVA with alpha 0.05. The students composite mathematics and science scores on the ACT were then used as covariates. No statistically significant differences were found between the two groups of students using ANCOVAs with alpha 0.05. To determine any difference in the attitude of the students toward STS issues the Science Technology and Society Attitude Scale 1996 Iowa Assessment Handbook was administered to the students. No significant difference was found between the two groups using a t test with alpha 0.05. The ChemCom and non ChemCom students with similar high school backgrounds were comparable in achievement in a university chemistry course and in attitude toward technological and societal issues.

Making it relevant Peter Nentwig, David Waddington, 2006. Teaching in context has become an accepted and often welcomed way of teaching science in both primary and secondary schools. The conference organised by IPN and the University of York Science Education Group. Context based science curricula drew on the experience of over 40 science educators and 10 projects. The book is arranged in four parts. Part A consists of two papers one on situated learning and the other on implementation of new curricula. Part B contains descriptions of five major curricula in different countries why they were introduced how they were developed and implemented and evaluation results. Part C gives descriptions of three projects that are of smaller scale and their materials are used as interventions in other more conventional curricula. There is also a contribution on some fundamental research where modules of work are written to examine how best to design context based curricula. Finally Part D consist of two chapters one summarising some of the findings that came out of the chapters in the three earlier parts and the second looks at the future.

Each chapter tells the story of a case in rich detail with extensive documentation and in the voices of many of the participants the innovators the teachers the students. Similarly Volume 3 of Bold Ventures pre sents the results from case studies of five

innovations in mathematics education Volume 1 provides a cross case analysis of all eight innovations Many U S readers certainly will be very familiar with the name of at least one if not all of the science innovations discussed in this volume for example Project 2061 and probably with their general substance Much of the education community s familiarity with these arises from the projects own dissemination efforts The research reported in this volume however is one of the few detailed studies of these innovations undertaken by researchers outside the projects themselves Each of the five studies was a large scale effort involving teams of researchers over three years These teams analyzed many documents attended numerous critical project meetings visited multiple sites conducted dozens of individual interviews The team leaders Atkin Huberman Rowe having spent much time with science education over long careers looked at these innovations through many lenses It was a daunting task for each team to sift through the mountains of detail in order to bring the most compelling themes to the surface
