Bottoms Up Scott Shackelford,Scott Russell,Jeffrey Haut,2016 Although there is a spectrum of cybersecurity regulatory frameworks emerging around the world ranging from more state centric approaches to voluntary initiatives more and more nations including the United States seem to be settling on a bottom up approach to enhancing private sector cybersecurity Emblematic of this movement in the U S context is the 2014 National Institute for Standards and Technology NIST Cybersecurity Framework This Framework which is comprised partly of regularly updated cybersecurity best practices has already been influential in shaping the field of cybersecurity due diligence not only in the United States but also in nations ranging from Canada to India However there has not yet been a thorough examination of the similarities and differences between these various bottom up approaches and the extent to which they are promoting the harmonization of cybersecurity best practices This Article addresses this omission by investigating a subset of national approaches to cybersecurity policymaking highlighting the extent to which they are converging and diverging using the NIST Framework as a baseline for comparison Such an understanding is vital not only to businesses operating across these jurisdictions but also to policymakers seeking to leverage the expertise of the private sector in promoting cyber peace **Cybersecurity** United States. Cyber Security and National Security of the United States Karim Saba,2013-07-31 Scientific Essay from the year 2013 in the subject Communications Multimedia Internet New Technologies Fort Hays State University course IDS 803 language English abstract The aim of this paper is to argue that the public private partnership represents the ultimate solution to protect the national cyber security of the United States against frequent and violent cyber attacks The paper will elaborate the importance of the cyber security to the national security of the United States then assesses the present solitary governmental defense measures and highlights the loopholes and defects of the current unilateral administrative strategy that does not involve the private sector neither in the decision making process nor in the execution phase of the defense strategy The paper will also highlight the roles of the White House military and intelligence agencies and subsequently connect them to the proposed public private partnership and how this partnership is going to synergize their roles Consequently this paper is concerned with the cyber defense strategy of the United States For the past three decades the United States has been struggling to formulate that strategy to counter the continuous cyber attacks and threats and to protect the national interest of our country With the constant advance in technology every day it s pretty much debatable whether our defense techniques are enough and deterrent Some may see the recommendations adopted throughout this paper argumentative However we all agree that cyberspace will never be fully secure In the same time there is much that can be done to acquire new strengths increase the ability to adapt and reduce the risk of those threats and attacks
