RELEASE David W. Johnson, John L. Woodward, 2010-09-17 This book documents CCPS's Aerosol Research Program to develop a model to predict liquid rainout from release of a pressurized liquefied gas and hence the residual amount of material in a vapor cloud which may be greater than the amount calculated from an enthalpy chart *RELEASE* predicts the rate of fluid discharge the depressurization flashing and formation of liquid drops the entrainment of drops into the vapor cloud the subsequent spreading of the jet and rate of liquid rainout to a pool on the ground Designed in a modular fashion to permit adjustment and corrections as new data become available its multi

layered approach contains sub models that include the complexities of many variables including the effect of liquid superheat rate of bubble growth criterion for bubble formation and heat transfer from the liquid to the growing vapor bubble To validate RELEASE CCPS conducted small and large scale experiments using superheated water heated liquefied chlorine methylamine and cyclohexane that produced valuable data in an area where data are scarce This book gives complete access in text and on CD ROM to the model and the test data giving users an informed ability to apply the model to their own work
