Financial Modeling Stephane Crepey, 2013-06-13

Backward stochastic differential equations BSDEs provide a general mathematical framework for solving pricing and risk management questions of financial derivatives They are of growing importance for nonlinear pricing problems such as CVA computations that have been developed since the crisis Although BSDEs are well known to academics they are less familiar to practitioners in the financial industry In order to fill this gap this book revisits financial modeling and computational finance from a BSDE perspective presenting a unified view of the pricing and hedging theory across all asset classes It also contains a review of quantitative finance tools including Fourier techniques Monte Carlo methods finite differences and model calibration schemes With a view to use in graduate courses in computational finance and financial modeling corrected problem sets and Matlab sheets have been provided
