High Speed Internal Combustion Engines Arthur William Judge, 2013-09 This historic book may have numerous typos and missing text Purchasers can usually download a free scanned copy of the original book without typos from the publisher Not indexed Not illustrated 1918 edition Excerpt theoretical valve diameter for a given gas velocity is 1 2 inches actually it has to be made 1 8 inches to allow for frictional effects through the valve etc for the same charge efficiency Heating of the Charge Although the fresh charge enters the induction pipe at atmospheric temperature yet by contact with the hot ports valves combustion chamber and piston top it rapidly becomes heated up This heating of the charge depends largely upon the design of the engine that is upon whether the charge has to pass over any appreciable amount of the hot engine surfaces before it reaches the cylinder proper The effect of premature heating of the charge is to cause the gases the petrol vapour and air to expand Further if the exhaust products are not effectively got rid of during the previous stroke the charge will also be heated by direct mixing and contact with the residual products In order to afford some idea as to the effect of a hot engine in reducing the charge volume Fig 68 which illustrates the results of some charge measurement tests upon a four cylinder car engine is shown Curve A represents the quantity of charge sucked in when the engine was motored around cold with the valves of course working in the usual manner for various engine speeds Curve B represents the quantity of charge inducted when the engine was firing in the usual way measured by means of the throttle plate method at the carburettor It will be evident from these curves that although in both

cases the quantity of charge drawn in falls off fairly rapidly with increase in the engine speed yet about 12 per cent more charge is drawn in when the cylinder is cold than when hot at 800 revolutions Hopkinson f mentions the case of a **Design and Control of Diesel and Natural Gas Engines for Industrial and Rail Transportation Applications** American Society of Mechanical Engineers.
