It helps improve patient care, advance medical knowledge and guide health policies. Health Risks and Fair Compensation in the Fire Service Tee L. Guidotti, 2015-10-27. This book is an overview of the hazards of firefighting, the health risks of exposure to combustion products that characterize firefighting, the science behind interpreting these risks for purposes of identifying diseases as work related and the legal and policy implications of adopting legislated presumption for purposes of compensation. The emphasis of the book will be on the risk of cancer, cardiovascular disease, traumatic hazards and disabling psychosocial adjustment following major incidents. Several new studies have appeared recently, including the largest study of firefighters ever done by the National Institute of Occupational Health and Safety (NIOSH). The evidence supports the conclusion that firefighters face significant occupational health risks in addition to the obviously severe safety hazards.

Health Psychology: A Textbook Ogden, Jane, 2012-05-01. Jane Ogden's Health Psychology is a smart and readable textbook that should appeal to both instructors and students of health psychology. Its overall structure is intuitively appealing and progresses from health beliefs to factors associated with becoming ill to the actual state of being ill. New to this edition is a wonderful chapter on the demographics of health and health behaviours. Using a number of striking graphs, Ogden highlights the disparities in health by geography, social class and gender. The book's greatest appeal, however, is its focus on the major ideas in health psychology. The reader is not bombarded with subtleties of dozens of studies; rather, the broader theories are emphasized. Whether you come to health psychology with a background in social, clinical, physiological or other specialization, you will find this to be a compelling book. James W. Pennebaker, Regents Centennial Professor of Psychology, University of Texas at Austin, USA. This 5th edition of Health Psychology represents an even more attractive book than the previous editions. The new figures and images illustrate the text and students are provided with clear up to date and accessible information on the major theoretical and empirical issues in health psychology. There are four new chapters and the one on health promotion is particularly impressive. The book now seems suited not only to health psychology students but also for
