Increased Clarity Improved Pedagogy In the new edition the authors have scrutinized every chapter with an eye toward bringing out key concepts and making connections easier to follow

Perennially challenging topics such as cellular energetics cell signaling and immunology have been revised to improve student understanding

Coverage of developmental biology has been streamlined to focus on just those key areas central to cell biology courses

Every figure in the book was reconsidered and if possible simplified to highlight key lessons

Revised end of chapter materials include new questions including additional Analyze the Data problems to give students added practice at interpreting experimental evidence

The result is a book that balances currency and experimental focus with attention to clarity organization and pedagogy

Highlights of the New Edition

Chapter 1 Molecules Cells and Evolution now frames cell biology in the light of evolution because we all come from the same ancestor cell the molecules and processes of cell biology are similar in all forms of life We can use model organisms to study aspects of cell structure and function that have been conserved across millions of years of evolution

Chapter 9 Culturing Visualizing and Perturbing Cells has been rewritten to include cutting edge methods including FRAP FRET siRNA and chemical biology making it a state of the art methods chapter

Cell signaling chapters Chapters 15 16 have been reorganized and illustrated with simplified overview figures to help students navigate the complexity of signaling pathways

Fully Reconceived Thoroughly Updated

Chapter 19 The Eukaryotic Cell Cycle now begins with the concept of START a cell's commitment to entering the cell cycle starting with DNA synthesis and then progresses through the cycle stages The chapter focuses on yeast and mammals and uses general names for cell cycle components as much as possible
