## LOCATION

**REMOTE** - Storage, management and processing occurs on a remote central network server. The data is accessible over the internet, away from the source.

**NEAR-ACCESS** - Data is processed physically close to or on the actual device, the data source, which is located at the edge of the network.

## LATENCY

**HIGH** - Frequent and high load data exchange puts strain on the network, resulting in high latency.

**LOW** - Requires little bandwidth as information is initially processed close to the data source.

## CAPACITY

**HIGH** - Can process large volumes of data and scale accordingly; cost is also determined by processing unit used.

**LOW** - Can only process so much data due to limited availability of resources. This is somewhat compensated by near-access communication with nodes.

## DISTRIBUTION

**CENTRALIZED** - The cloud is a Centrally Managed System (CMS), which means it is controlled by a single entity.

**DECENTRALIZED** - Computations are performed at the edge of the network, often utilizing distributed nodes.

## SECURITY

**HIGH** - The virtual server is managed by one entity, which ensures maximum protection

**MEDIUM** - Distributed data means security can be more susceptible to individual threats and unaccounted outside factors.

## BENEFITS

- Cost reduction
- Scalability
- Accessibility
- Security

- High speed and responsiveness
- Low latency
- Real-time results
- Edge analytics

## USE CASES

Inventory, BI and Big Data storage, deep analysis, rich data visualisation, dashboards, reports, back-end access

IoT (handheld devices, wearables) and IIoT (factory floor robots, digital signage at retail stores) devices, MRIs, traffic lights, autonomous vehicles, ATMs - mission critical use cases in general.

*Overview and Issues for Implementation of the Federal Cloud Computing Initiative* Congressional Research Service,2015-02-19 Cloud computing is a new name for an old concept the delivery of computing services from a remote location analogous to the way electricity water and other utilities are provided to most customers Cloud computing services are delivered through a network usually the Internet Some cloud services are adaptations of familiar applications such as email and word processing Others are new applications that never existed as a local application such as online maps and social networks Since 2009 the federal government has been shifting its data storage needs to cloud based services and away from agency owned data centers This shift is intended to reduce the total investment by the federal government in information technology IT data centers as well as realize other stated advantages of cloud adoption efficiency accessibility collaboration rapidity of innovation reliability and security In December 2010 the U S Chief Information Officer CIO released A 25 Point Implementation Plan to Reform Federal IT Management as part of a comprehensive effort to increase the operational efficiency of federal technology assets One element of the 25 Point Plan is for agencies to shift to a Cloud First policy which is being implemented through the Federal Cloud Computing Strategy The Cloud First policy means that federal agencies must 1 implement cloud based solutions whenever a secure reliable and cost effective cloud option exists and 2 begin reevaluating and modifying their individual IT budget strategies to include cloud computing However there are

challenges facing agencies as they make this shift For example some agency CIOs have stated that in spite of the stated security advantages of cloud computing they are in fact concerned about moving their data from their data centers which they manage and control to outsourced cloud services This and other concerns must be addressed to build an agency culture that trusts the cloud Congress has a number of means to monitor the status of the Federal Cloud Computing Initiative FCCI Individual committees may wish to monitor agencies under their jurisdiction by holding hearings requesting review of an agency s status through the agency itself or a GAO study and or assessing an agency s progress and projected goals against the stated goals of the FCCI
