Holographic and Speckle Interferometry Robert Jones, Catherine Wykes, 1989-01-26 Holographic and speckle interferometry are optical techniques which use lasers to make non contracting field view measurements at a sensitivity of the wavelength of light on optically rough i.e non mirrored surfaces They may be used to measure static or dynamic displacements the shape of objects and refractive index variations of transparent media As such these techniques have been applied to the solution of a wide range of problems in strain and vibrational analysis non destructive testing NDT component inspection and design analysis and fluid flow visualisation This book provides a self contained unified theoretical analysis of the basic principles and associated opto electronic techniques for example Electronic Speckle Pattern Interferometry In addition a detailed discussion of experimental design and practical application to the solution of physical problems is presented In this new edition the authors have taken the opportunity to include a much more coherent description of more than twenty individual case studies that are representative of the main uses to which the techniques are put The Bibliography has also been brought up to date

Ultrafast Fiber Switching Devices and Systems Mohammed N. Islam, 1992-08-06 This 1992 book surveys the field of ultrafast fiber switching devices and systems that have potential processing speeds in excess of 50 gigabits per second The treatment covers basic physical principles device physics and systems applications The purpose of the book is to provide a complete tour of the key research issues and approaches in ultrafast switching Topics covered include routing and logic devices solitons in optical fibers and the application of ultrafast gates to telecommunications transmission systems local area networks and optical computing The author is a member of the Technical Staff in basic research at AT T Bell Laboratories Holmdel and is excellently positioned to provide this state of the
