ABSTRACT

A compact rupee shaped CPW-fed antenna with dual-band operation for worldwide interoperability for microwave access (WiMAX) and wireless local area network (WLAN) applications is proposed in this paper. The antenna has a very simple structure and a compact size of $17 \times 17.5 \times 1.6 \text{ mm}^3$. A prototype is fabricated and then tested. The measured impedance bandwidth at VSWR 2:1 is 700 MHz from 3.2-3.9 GHz and 870 MHz from 4.7-5.57 GHz which covers the 5.2/5.8 GHz WLAN and 3.5/5.5 GHz WiMAX bands. The measured and simulated results are found to be in good agreement.

Keywords

CPW-fed, compact antenna, WiMAX, WLAN.

1. INTRODUCTION

In the recent years much attention has been paid towards the development of compact multi-band antennas with less fabrication cost and good performance characteristics for various wireless communication applications such as wireless local area network (WLAN) and worldwide interoperability for microwave access (WiMAX). Various types of multi-frequency antennas have been designed and developed over the few years, which can be used for multi-frequency operations, such as Planar Inverted F-shaped Antenna (PIFA) [1], monopole antenna [2], patch antenna [3], slot antenna, and others [4-6]. Out of these, printed monopole antennas are most suitable for integration on the circuit board of a communication device, which gives the attractive features of occupying very small volume of the system and decreasing the fabrication cost of the final product. From the available literature, the printed monopole antennas reported in [7-9] are capable of single-band operation only, and the printed dual-band inverted-F monopole antenna shown in [10] requires a shorting pin for ground connection, which increases the antenna complexity and the fabrication cost as well. In addition to the design using the printed monopole antenna, the printed dipole antenna for dual-band operation has also been given in [11], in which two separate dipoles of different arm lengths are printed on both sides of a dielectric substrate and the longer and shorter dipoles arms, respectively, the antenna had been designed to generate a resonant mode for operating in the 2.4 and 5.2 GHz bands.

Various designs of dual-band antennas have also been demonstrated in the recent years. For example, the antenna presented in [12] consists of a rectangular patch and straight strips with different lengths, and the antenna proposed in [13] comprises a direct-radiating patch and a parasitic C-shaped strip. To enhance the bandwidth, a dual wideband monopole

antenna [14] was proposed with a parasitic patch using electromagnetic coupling mechanism to cover the whole WLAN bands and WiMAX bands. However, the overall size of the antenna is somewhat large ($48 \times 58 \text{ mm}^2$), occupying much of the device space. A modified ground plane on the bottom layer further more improves the high frequency performances [15]. Some CPW-fed monopole antennas also have been proposed to meet the dual-band requirements, such as G-shaped [16] and triangle-shaped [17-18]. The above stated prototypes usually use large ground plane and thick substrate. All the above reported antennas are good in bandwidth and radiation characteristic, while a few of them are having relatively larger size, and therefore they are very difficult to integrate with miniaturized wireless mobile communication devices.

In this paper, a compact rupee shaped Coplanar Waveguide (CPW) fed antenna design with dual-band operation is proposed, the geometry of which is described in Section 2. The antenna has a compact size and is useful for WLAN and WiMAX applications. The proposed antenna consists of a rupee shape patch, two rectangular strips extending from the rupee shape patch, and a CPW feed line. The proposed antenna was designed, optimized and tested using electromagnetic software; CST Microwave Studio based on the Finite Integration Technique (FIT). By properly selecting the dimensions of the proposed antenna, good dual-band impedance bandwidth and radiation characteristics suitable for the WLAN/WiMAX communication systems can be obtained. Measured results show that the antenna has the impedance bandwidth of 700 MHz (3.2-3.9 GHz), and 870 MHz (4.7-5.5 GHz), which can cover the 5.2 GHz WLAN bands and 3.5/5.5 GHz WiMAX bands. More Details of simulated results and behavioral analysis are presented and discussed in the following sections.

2. ANTENNA DESIGN

As shown in Figure 1, the configuration of the proposed antenna is designed, optimized, and fabricated on a 1.6 mm thick FR4 substrate having permittivity of 4.4 and loss tangent of 0.02. The overall size of the antenna is $17 \times 17.5 \times 1.6 \text{ mm}^3$. The rupee shape patch is fed by a 50Ω CPW line. Two rectangular shaped strips are employed to produce two resonant modes. The dimensions of the proposed antenna are optimized and shown in Table 1.
