Advances in Dynamic Games Alain Haurie, Shigeo Muto, Leon A. Petrosjan, T. E. S. Raghavan, 2007-04-03 This book an outgrowth of the 10th International Symposium on Dynamic Games presents current developments of the theory of dynamic games and its applications The text uses dynamic game models to approach and solve problems pertaining to pursuit evasion marketing finance climate and environmental economics resource exploitation as well as auditing and tax evasions It includes chapters on cooperative games which are increasingly drawing dynamic approaches to their classical solutions *Dynamic Games and Applications in Economics* Tamer Başar, 2012-12-06 This volume contains eleven articles which deal with different aspects of dynamic and differential game theory and its applications in economic modeling and decision making All but one of these were presented as invited papers in special sessions I organized at the 7th Annual Conference on Economic Dynamics and Control in London England during the period June 26 28 1985 The first article which comprises Chapter 1 provides a general introduction to the topic of dynamic and differential game theory discusses various noncooperative equilibrium solution concepts including Nash Stackelberg and Consistent Conjectural Variations equilibria and a number of issues such as feedback and time consistency The second chapter deals with the role of information in Nash equilibria and the role of leadership in Stackelberg problems A special type of a Stackelberg problem is the one in which one dominant player leader acquires dynamic information involving the actions of the others followers and constructs policies so called incentives which enforce a certain type of behavior on the followers Chapter 3 deals with such a class of problems and presents some new theoretical results on the existence of affine incentive policies The topic of Chapter 4 is the computation of equilibria in discounted stochastic dynamic games Here for problems with finite state and decision spaces existing algorithms are reviewed with a comparative study of their speeds of convergence and a new algorithm for the computation of nonzero sum game equilibria is presented *Advances in Dynamic Games* Andrzej S. science This surge of interest has led to the formation of the International Society of Dynamic Games ISDG in 1990 whose primary goal is to foster the development of advanced research and applications in the field of game theory One important activity of the Society is to organize biannually an international symposium which aims at bringing together all those who contribute to the development of this active field of applied science In 1992 the symposium was organized in Grimentz Switzerland under the supervision of an international scientific committee and with the help of a local organizing committee based at University of Geneva This book which is the first volume in the new Series Annals of the International Society of Dynamic Games see the Preface to the Series is based on presentations made at this symposium It is however more than a book of proceedings for a conference Every paper published in this volume has passed through a very selective refereeing process as in an archival technical journal
