

## Astronaut in waiting

In our solar system, we have 8 planets which revolve around the sun. Because the sun is extremely large, it has a higher gravitational pull, holding all of the planets in their orbits.

Scientists believe that the solar system was created from a massive ball of dust and gas. As all the particles disintegrated, it formed a spiral. This spiral collected all of the material, and turned into the sun. The smaller collections of dust and gas formed other parts of our solar system: planets, moons and stars.

The planets which are closest to the sun have hotter surface areas making it impossible for humans to visit. Other planets, further from the sun, would be too cold to live on, and because there is little oxygen, humans would not be able to breathe.

Although space travel for the average Joe on the streets is not yet possible, money is being invested into space travel for the masses in the future. Channel 4 has even broadcast a programme allowing exceptional individuals to sample the tests NASA perform on potential astronauts. These include withstanding G-force, staying calm in life-threatening situations and being able to multi-task when completing complex activities. At the end, the winner will have the ultimate reference- an ex-astronaut promoting the individual to NASA.

Who knows? The next astronaut could be you.
