Thomas Register, 2004 **Exploring Young Children's Ideas about Wearable Technology** Bridgette Atkins, 2017

This case study which forms a part of the Kids Creative Storyworlds and Wearables project explores children's perspectives on wearable technology through their stories and other creative ideas inspired by wearable technology. Five children between the ages of four and seven were each given a smartwatch and were interviewed three times over the span of four weeks. Using a multi-method approach inspired by the Mosaic approach to ethnography (Clark Clark 2005) and social semiotics (Kress and van Leeuwen 2006, Kress 1997), children were invited to share their ideas in a variety of ways: face-to-face discussion, oral storytelling, written text, and drawings. This research viewed children as meaning makers and sign makers. Results supported and extended elements of Papert's constructionist learning theory and Sutton-Smith's play as a viability variable theory (2008) and provided novel insights relevant to formal education practices. Empowerment is a key theme that emerged from this case study.
