**Defense of the Scientific Hypothesis** Bradley Eugene Alger, 2020 Defense of Scientific Hypothesis From Reproducibility Crisis to Big Data sets out to explain and defend the scientific hypothesis Alger's mission is to counteract the misinformation and misunderstanding about the hypothesis that even seasoned scientists have concerning its nature and place in modern science Most biological scientists receive little or no formal training in scientific thinking Further the hypothesis is under attack by critics who claim that it is irrelevant to science In order to appreciate and evaluate scientific controversies like global climate change vaccine safety etc the public first needs to understand the hypothesis Defense of Scientific Hypothesis begins by describing and analyzing the scientific hypothesis in depth and examining its relationships to various kinds of science Alger then guides readers through a review of the hypothesis in the context of the Reproducibility Crisis and presents survey data on how scientists perceive and employ hypotheses He assesses cognitive factors that

influence our ability to use the hypothesis and makes practical and policy recommendations for teaching and learning about it Finally Alger considers two possible futures of the hypothesis in science as the Big Data revolution looms in one scenario the hypothesis is displaced by the Big Data Mindset that forgoes understanding in favor of correlation and prediction In the other robotic science incorporates the hypotheses into mechanized laboratories guided by artificial intelligence But in his illuminating epilogue Alger envisions a third way the Centaur Scientist a symbiotic relationship between human scientists and computers

*Emerging Model Organisms*, 2009 Until recently a small number of model organisms has been the focus of most research in molecular cellular and developmental biology But in the last few years due in part to increased interest in questions of evolution technical advances in selectively altering gene expression patterns and reduced costs of genome sequencing the range of organisms used for research is greatly expanding *Emerging Model Organisms* Volume 1 introduces the reader to this new generation of model organisms providing a diverse catalog of potential species useful for extending research in new directions In this volume leading experts provide chapters on 23 emerging model systems ranging from bat and butterfly to cave fish and choanoflagellates cricket and finch to quail snail and tomato Subsequent releases of the *Emerging Model Organisms* series already in preparation will focus on additional species Richard Behringer Rob Krumlauf Sandy Johnson Mike Levine Nipam Patel Neelima Sinha Publisher
