Cyber Security and National Security of the United States Karim Saba, 2013-07-31 Scientific Essay from the year 2013 in the subject Communications Multimedia Internet New Technologies Fort Hays State University course IDS 803 language English abstract The aim of this paper is to argue that the public private partnership represents the ultimate solution to protect the national cyber security of the United States against frequent and violent cyber attacks The paper will elaborate the importance of the cyber security to the national security of the United States then assesses the present solitary governmental defense measures and highlights the loopholes and defects of the current unilateral administrative strategy that does not involve the private sector neither in the decision making process nor in the execution phase of the defense strategy The paper will also highlight the roles of the White House military and intelligence agencies and subsequently connect them to the proposed public private partnership and how this partnership is going to synergize their roles Consequently this paper is concerned with the cyber defense strategy of the United States For the past three decades the United States has been struggling to formulate that strategy to counter the continuous cyber attacks and threats and to protect the national interest of our country With the constant advance in technology every day it s pretty much debatable whether our defense techniques are enough and deterrent Some may see the recommendations adopted throughout this paper argumentative However we all agree that cyberspace will never be fully secure In the same time there is much that can be done to acquire new strengths increase the ability to adapt and reduce the risk of those threats and attacks

Exploding Data Michael Chertoff, 2018-08-02 A powerful argument for new laws and policies regarding cyber security from the former US

Secretary of Homeland Security The most dangerous threat we individually and as a society face today is no longer military but rather the increasingly pervasive exposure of our personal information nothing undermines our freedom more than losing control of information about ourselves And yet as daily events underscore we are ever more vulnerable to cyber attack In this bracing book Michael Chertoff makes clear that our laws and policies surrounding the protection of personal information written for an earlier time need to be completely overhauled in the Internet era On the one hand the collection of data more widespread by business than by government and impossible to stop should be facilitated as an ultimate protection for society On the other standards under which information can be inspected analysed or used must be significantly tightened In offering his compelling call for action Chertoff argues that what is at stake is not only the simple loss of privacy which is almost impossible to protect but also that of individual autonomy the ability to make personal choices free of manipulation or coercion Offering colourful stories over many decades that illuminate the three periods of data gathering we have experienced Chertoff explains the complex legalities surrounding issues of data collection and dissemination today and charts a forceful new strategy that balances the needs of government business and individuals alike Cybersecurity Government Accountability Office,2017-08-08 Federal government agencies and the nation s critical infrastructures have become increasingly dependent on computerized information systems and electronic data to carry out their operations While creating significant benefits this can also introduce vulnerabilities to cyber threats Pervasive cyber attacks against the United States could have a serious impact on national security the economy and public health and safety The number of reported cyber incidents has continued to rise resulting in data theft economic loss and privacy breaches Federal law and policy assign various entities responsibilities for securing federal information systems and protecting critical infrastructures GAO has designated federal information security as a high risk area since 1997 and in 2003 expanded this to include cyber critical infrastructure protection GAO was asked to testify on its recent report on challenges facing the government in effectively implementing cybersecurity and the extent to which the national cybersecurity strategy includes desirable characteristics of a national strategy In preparing this statement GAO relied on the report as well as related previous work **Creating a National Framework for Cybersecurity: An Analysis of Issues and Options** ,2005 Even before the terrorist attacks of September 2001 concerns had been rising among security experts about the vulnerabilities to attack of computer systems and associated infrastructure Yet despite increasing attention from federal and state governments and international organizations the defense against attacks on these systems has appeared to be generally fragmented and varying widely in effectiveness Concerns have grown that what is needed is a national cybersecurity framework a coordinated coherent set of public and private sector efforts required to ensure an acceptable level of cybersecurity for the nation As commonly used cybersecurity refers to three things measures to protect information technology the information it contains processes and transmits and associated physical and virtual elements the degree of protection resulting from application of those measures

and the associated field of professional endeavor Virtually any element of cyberspace can be at risk and the degree of interconnection of those elements can make it difficult to determine the extent of the cybersecurity framework that is needed Identifying the major weaknesses in U S cybersecurity is an area of some controversy However some components appear to be sources of potentially significant risk because either major vulnerabilities have been identified or substantial impacts could result from a successful attack There are several options for broadly addressing weaknesses in cybersecurity They include adopting standards and certification promulgating best practices and guidelines using benchmarks and checklists use of auditing improving training and education building security into enterprise architecture using risk management and using metrics
