Roberto, 2015-03-07 This collection of critical and scholarly essays addresses the state of cataloging in the world of librarianship The contributors including Sanford Berman Thomas Mann and numerous front line library workers address topics ranging from criticisms of the state of the profession and traditional Library of Congress cataloging to methods of making cataloging more inclusive and helpful to library users Other essay topics include historical overviews of cataloging practices and the literature they generate first person discussions of library workers experiences with cataloging or metadata work and the implications behind what materials get cataloged who catalogs them and how Several essays provide a critical overview of innovative cataloging practices and the ways that such practices have been successfully integrated in many of the nation s leading libraries Instructors considering this book for use in a course may request an examination copy here *Dictionary of Computing. [Mit Abb.] (2. Repr.)* Oxford University Press, 1984 Using Computers in the Translation of Literary Style Roy Youdale, 2019-06-13 This volume argues for an innovative interdisciplinary approach to the analysis and translation of literary style based on a mutually supportive combination of traditional close reading and distant reading involving corpus linguistic analysis and text visualisation The book contextualizes this approach within the broader story of the development of computer assisted translation including machine translation and the use of CAT tools and elucidates the ways in which the approach can lead to better informed translations than those based on close reading alone This study represents the first systematic attempt to use corpus linguistics and text visualisation in the process

of translating individual literary texts as opposed to comparing and analysing already published originals and their translations Using the case study of his translation into English of Uruguayan author Mario Benedetti s 1965 novel *Gracias por el Fuego* Youdale showcases how a close and distant reading approach CDR enhances the translator s ability to detect and measure a variety of stylistic features ranging from sentence length and structure to lexical richness and repetition both in the source text and in their own draft translation thus assisting them with the task of revision The book reflects on the benefits and limitations of a CDR approach its scalability and broader applicability in translation studies and related disciplines making this key reading for translators postgraduate students and scholars in the fields of literary translation corpus linguistics corpus stylistics and narratology *Dictionary of Computing* Valerie Illingworth,1990 Previous editions of this unique dictionary received wide acclaim from students and professionals alike They welcomed it for providing convenient and easy to use access to the complex terminology of computer science and information technology This third edition reflects recent advances in all aspects of computing especially new approaches to programming computer architecture and new computer languages Over 550 new entries describe developments in software hardware microcomputing networking and information management Technical terms are lucidly and concisely explained while important social and legal issues receive in depth attention The entries which extend to over 4500 terms have been written by noted experts in their respective areas Useful diagrams and tables supplement the text where appropriate This remarkable reference will be invaluable for all those using computers in their school business or home as well as for general readers who seek current information concerning the fast growing world of computers **The Australian Library Journal** ,2004 Choice ,2007
