Invitation To Computer Science 7th Edition Pdf:

Computational Thinking: A Perspective on Computer Science Zhiwei Xu, Jialin Zhang, 2022-01-01 This textbook is intended as a textbook for one semester introductory computer science courses aimed at undergraduate students from all disciplines. Self-contained and with no prerequisites, it focuses on elementary knowledge and thinking models. The content has been tested in university classrooms for over six years and has been used in summer schools to train university and high school teachers on teaching introductory computer science courses using computational thinking. This book introduces computer science from a computational thinking perspective. In computer science, the way of thinking is characterized by three external and eight internal features, including automatic execution, bit accuracy, and abstraction. The book is divided into chapters on logic thinking, algorithmic thinking, systems thinking, and network thinking. It also covers societal impact and responsible computing material from ICT industry to digital economy, from the wonder of exponentiation to wonder of cyberspace, and from code of conduct to best practices for independent work. The book's structure encourages active hands-on learning using the pedagogic tool Bloom's taxonomy to create computational solutions to over 200 problems of varying difficulty. Students solve problems using a combination of thought experiment, programming, and written methods. Only 300 lines of code in total are required to solve most programming problems in this book. Building upon a research study whereby pupils instruct their teachers in the use of Information and Communication Technology (ICT), the author argues that using student voice in this way can result in transformational learning for all those involved. The author presents the processes and experiences of pupils taking on the role of educators, as well as the experiences of the teachers receiving such professional development from their students. In

doing so he promotes the innovative use of a student voice initiative to support teaching and learning with the overarching purpose of improving and transforming teacher pupil relationships This book will be of interest and value to students and scholars of pupil voice teacher professional development and transformational learning
