A long-standing goal of artificial intelligence is an algorithm that learns, *tabula rasa*, superhuman proficiency in challenging domains. Recently, *AlphaGo* became the first program to defeat a world champion in the game of Go. The tree search in *AlphaGo* evaluated positions and selected moves using deep neural networks. These neural networks were trained by supervised learning from human expert moves, and by reinforcement learning from self-play. Here, we introduce an algorithm based solely on reinforcement learning, without human data, guidance, or domain knowledge beyond game rules. *AlphaGo* becomes its own teacher: a neural network is trained to predict *AlphaGo*'s own move selections and also the winner of *AlphaGo*'s games. This neural network improves the strength of tree search, resulting in higher quality move selection and stronger self-play in the next iteration. Starting *tabula rasa*, our new program *AlphaGo Zero* achieved superhuman performance, winning 100-0 against the previously published, champion-defeating *AlphaGo*.

Much progress towards artificial intelligence has been made using supervised learning systems that are trained to replicate the decisions of human experts <sup>1-4</sup>. However, expert data is often expensive, unreliable, or simply unavailable. Even when reliable data is available it may impose a ceiling on the performance of systems trained in this manner <sup>5</sup>. In contrast, reinforcement learning systems are trained from their own experience, in principle allowing them to exceed human capabilities, and to operate in domains where human expertise is lacking. Recently, there has been rapid progress towards this goal, using deep neural networks trained by reinforcement learning. These systems have outperformed humans in computer games such as Atari <sup>6,7</sup> and 3D virtual environments <sup>8-10</sup>. However, the most challenging domains in terms of human intellect – such as the

The Alignment Problem Brian Christian, 2020-10-06 If you're going to read one book on artificial intelligence this is the one Stephen Marche New York Times A jaw dropping exploration of everything that goes wrong when we build AI systems and the movement to fix them Today's machine learning systems trained by data are so effective that we've invited them to see and hear for us and to make decisions on our behalf But alarm bells are ringing Recent years have seen an eruption of concern as the field of machine learning advances When the systems we attempt to teach will not in the end do what we want or what we expect ethical and potentially existential risks emerge Researchers call this the alignment problem Systems cull resumes until years later we discover that they have inherent gender biases Algorithms decide bail and parole and appear to assess Black and White defendants differently We can no longer assume that our mortgage application or even our medical tests will be seen by human eyes And as autonomous vehicles share our streets we are increasingly putting our lives in their hands The mathematical and computational models driving these changes range in complexity from something that can fit on a spreadsheet to a complex system that might credibly be called artificial intelligence They are steadily replacing both human judgment and explicitly programmed software In best selling author Brian Christian's riveting account we meet the alignment problem's first responders and learn their ambitious plan to solve it before our hands are completely off the wheel In a masterful blend of history and on the ground reporting Christian traces the explosive growth in the field of machine learning and surveys its current sprawling frontier Readers encounter a discipline finding its legs amid exhilarating and sometimes terrifying progress Whether they and we succeed or fail in solving the alignment problem will be a defining human story The Alignment Problem offers an unflinching reckoning with humanity's biases and blind spots our own unstated assumptions and often contradictory goals A dazzlingly interdisciplinary work it takes a hard look not only at our technology but at our culture and finds a story by turns harrowing and hopeful *Principles of Machine Learning* Wenmin Wang, 2024-10-26 Conducting an in depth analysis of machine learning this book proposes three perspectives for studying machine learning the learning frameworks learning paradigms and learning tasks With this categorization the learning frameworks reside within the theoretical perspective the learning paradigms pertain to the methodological perspective and the learning tasks are situated within the problematic perspective Throughout the book a systematic explication of machine learning principles from these three perspectives is provided interspersed with some examples The book is structured into four parts encompassing a total of fifteen chapters The inaugural part titled Perspectives comprises two chapters an introductory exposition and an exploration of the conceptual foundations The second part Frameworks subdivided into five chapters each dedicated to the discussion of five seminal frameworks probability statistics connectionism symbolism and behaviorism Continuing further the third part Paradigms encompasses four chapters that explain the three paradigms of supervised learning unsupervised learning and reinforcement learning and narrating several quasi paradigms emerged in

machine learning Finally the fourth part Tasks comprises four chapters delving into the prevalent learning tasks of classification regression clustering and dimensionality reduction This book provides a multi dimensional and systematic interpretation of machine learning rendering it suitable as a textbook reference for senior undergraduates or graduate students pursuing studies in artificial intelligence machine learning data science computer science and related disciplines Additionally it serves as a valuable reference for those engaged in scientific research and technical endeavors within the realm of machine learning The translation was done with the help of artificial intelligence A subsequent human revision was done primarily in terms of content

**Intelligenz in der Unternehmenskommunikation. Einsatzmöglichkeiten und Spannungsfelder** Oliver Tissen, 2021-09-30 Masterarbeit aus dem Jahr 2021 im Fachbereich BWL Unternehmenskommunikation Note 1,3 Universität des Saarlandes Sprache Deutsch Abstract Das Ziel dieser Arbeit ist es herauszufinden, ob, wie und wo sich Künstliche Intelligenz in der Unternehmenskommunikation effizient einsetzen lassen kann und welche Tools, Prozesse und nicht zuletzt ethischen Aspekte beachtet werden müssen. Es soll geklärt werden, wie sich Algorithmen in Bezug auf Dialogfähigkeit und Kommunikationsmanagement designen lassen und ob diese generalisiert als Muster einsetzbar sind. Im Zuge der Arbeit wird untersucht, ob sich kommunikative und technologische Muster beim Einsatz von KI in der Unternehmenskommunikation allgemeingültig feststellen und replizieren/skalieren lassen. Dabei wird neben der technischen auch die kommunikative Komponente anhand von Teilaspekten und Disziplinen der Unternehmenskommunikation beleuchtet und versucht, zu einem allgemeingültigen Konzept für den Einsatz in der Unternehmenskommunikation großer und kleiner Unternehmen zu gelangen. Im Rahmen dieser Arbeit werden die folgenden Forschungsfragen gestellt: Gibt es Wirkungsfelder in der Unternehmenskommunikation, die sich besonders eignen, um zum einen eine ziel- und wirkungsgerichtete Unternehmenskommunikation automatisiert zu gestalten und zum anderen diese Wirkungsfelder in einen kontinuierlichen Lernprozess für die KI zu überführen? Welche Fragestellungen zu Kommunikation und Ethik müssen in Bezug auf Entscheidungsfindungen im Kommunikationsprozess beachtet werden? Wo liegen die Spannungsfelder und wo sind die Grenzen beim Einsatz von KI in der Kommunikation? Können auf Basis automatisierter Auswertungen von Informationsclustern oder Signalen aus den Medien Medienresonanzthemen und Trends für die eigene Kommunikationsplanung erkannt und vorausgeplant werden? Kann eine KI im Rahmen eines Kommunikationsframeworks integriert und kontrolliert werden? Welche Regeln und Muster können in einem solchen Framework nach welchen Kriterien festgelegt werden?
