

NAME

curl – transfer a URL

SYNOPSIS

curl [options] [URL...]

DESCRIPTION

curl is a tool to transfer data from or to a server, using one of the supported protocols (HTTP, HTTPS, FTP, FTPS, GOPHER, DICT, TELNET, LDAP or FILE). The command is designed to work without user interaction.

curl offers a busload of useful tricks like proxy support, user authentication, ftp upload, HTTP post, SSL (https) connections, cookies, file transfer resume and more. As you will see below, the amount of features will make your head spin!

curl is powered by libcurl for all transfer-related features. See [libcurl\(3\)](#) for details.

URL

The URL syntax is protocol dependent. You'll find a detailed description in RFC 2396.

You can specify multiple URLs or parts of URLs by writing part sets within braces as in:

```
http://site.{one,two,three}.com
```

or you can get sequences of alphanumeric series by using [] as in:

```
ftp://ftp.numericals.com/file[1-100].txt
ftp://ftp.numericals.com/file{001-100}.txt  (with leading zeros)
ftp://ftp.letters.com/file[a-z].txt
```

No nesting of the sequences is supported at the moment, but you can use several ones next to each other:

```
http://any.org/archive[1996-1999]/vol[1-4]/part{a,b,c}.html
```

You can specify any amount of URLs on the command line. They will be fetched in a sequential manner in the specified order.

Curl will attempt to re-use connections for multiple file transfers, so that getting many files from the same server will not do multiple connects / handshakes. This improves speed. Of course this is only done on files specified on a single command line and cannot be used between separate curl invokes.

OPTIONS

-a/--append

(FTP) When used in an FTP upload, this will tell curl to append to the target file instead of overwriting it. If the file doesn't exist, it will be created.

If this option is used twice, the second one will disable append mode again.

-A/--user-agent <agent string>

(HTTP) Specify the User-Agent string to send to the HTTP server. Some badly done CGIs fail if its not set to "Mozilla/4.0". To encode blanks in the string, surround the string with single quote marks. This can also be set with the **-H/--header** option of course.

If this option is set more than once, the last one will be the one that's used.

--anyauth

(HTTP) Tells curl to figure out authentication method by itself, and use the most secure one the remote site claims it supports. This is done by first doing a request and checking the response.

Word Mac Curl Manual

J Spring

Word Mac Curl Manual:

Unveiling the Energy of Verbal Beauty: An Psychological Sojourn through **Word Mac Curl Manual**

In a global inundated with displays and the cacophony of immediate communication, the profound energy and mental resonance of verbal beauty often fade into obscurity, eclipsed by the continuous barrage of sound and distractions. However, situated within the musical pages of **Word Mac Curl Manual**, a fascinating perform of fictional brilliance that impulses with organic feelings, lies an unforgettable journey waiting to be embarked upon. Written by way of a virtuoso wordsmith, this enchanting opus courses viewers on an emotional odyssey, lightly exposing the latent potential and profound influence embedded within the intricate internet of language. Within the heart-wrenching expanse with this evocative analysis, we shall embark upon an introspective exploration of the book is central styles, dissect their captivating publishing type, and immerse ourselves in the indelible impact it leaves upon the depths of readers souls.
