

Baby's growing brain

Even though the brain keeps growing and changing into adulthood, the first 3 years are an important time of rapid growth that helps build the foundation for all future learning.

Supporting baby's brain development

Babies are born ready to learn! Parents and caregivers can support healthy brain development by interacting with their baby using language, play, and care.

The brain is responsible for:

- ✓ Learning and problem-solving

The brain doubles in size in the first year!

By age 3, it's about 80% of an adult size brain.

Breastfeeding

is associated with improved cognitive ability.

Sleep

supports healthy development as baby grows from infancy into early childhood.

The early years set the stage for advanced abilities:

- ✓ Self-regulation

Nutrients for brain development

During infancy and toddlerhood, a baby's brain forms many complex systems they will use throughout their entire life. Getting the right nutrients from infancy to toddlerhood is important to help the brain develop to its fullest.

Baby's key developmental milestones

First smiles, "peek-a-boo" games, and wobbly steps are all developmental milestones. While babies develop at their own pace, there are typical ages when these milestones occur.
