Techniques and Applications in Institutional Research Joe L. Lott, James S. Antony, 2013-02-22 Multilevel modeling is an increasingly popular multivariate technique that is widely applied in the social sciences Increasingly practitioners are making instructional decisions based on results from their multivariate analyses which often come from nested data that lend themselves to multilevel modeling techniques As data driven decision making becomes more critical to colleges and universities multilevel modeling is a tool that will lead to more efficient estimates and enhance understanding of complex relationships This volume illustrates both the theoretical underpinnings and practical applications of multilevel modeling in IR It introduces the fundamental concepts of multilevel modeling techniques in a conceptual and technical manner Providing

a range of examples of nested models that are based on linear and categorical outcomes it then offers important suggestions about presenting results of multilevel models through charts and graphs This is the 154th volume of this Jossey Bass quarterly report series Always timely and comprehensive New Directions for Institutional Research provides planners and administrators in all types of academic institutions with guidelines in such areas as resource coordination information analysis program evaluation and institutional management Practical Multilevel Modeling Using R Francis L.

Huang,2022-12-07 Practical Multilevel Modeling Using R provides students with a step by step guide for running their own multilevel analyses Detailed examples illustrate the conceptual and statistical issues that multilevel modeling addresses in a way that is clear and relevant to students in applied disciplines Clearly annotated R syntax illustrates how multilevel modeling MLM can be used and real world examples show why and how modeling decisions can affect results The book covers all the basics but also important advanced topics such as diagnostics detecting and handling heteroscedasticity power analysis and missing data handling methods Unlike other detailed texts on MLM which are written at a very high level this text with its applied focus and use of R software to run the analyses is much more suitable for students who have substantive research areas but are not training to be methodologists or statisticians Each chapter concludes with a Test Yourself section and solutions are available on the instructor website for the book A companion R package is available for use with this text
