Nonlinear Optimization with Engineering Applications Michael Bartholomew-Biggs, 2008-12-16 This book like its companion volume Nonlinear Optimization with Financial Applications is an outgrowth of undergraduate and postgraduate courses given at the University of Hertfordshire and the University of Bergamo It deals with the theory behind numerical methods for nonlinear optimization and their application to a range of problems in science and engineering The book is intended for final year undergraduate students in mathematics or other subjects with a high mathematical or computational content and exercises are provided at the end of most sections The material should also be useful for postgraduate students and other researchers and practitioners who may be concerned with the development or use of optimization algorithms It is assumed that readers have an understanding of the algebra of matrices and vectors and of the Taylor and mean value theorems in several variables Prior experience of using computational techniques for solving systems of linear equations is also desirable as is familiarity with the behaviour of iterative algorithms such as Newton's method for nonlinear equations in one variable Most of the currently popular methods for continuous nonlinear optimization are described and given at least an intuitive justification Relevant convergence results are also outlined and we provide proofs of these when it seems instructive to do so This theoretical material is complemented by numerical illustrations which give a flavour of how the methods perform in practice

Continuous Nonlinear Optimization for Engineering Applications in GAMS Technology Neculai Andrei, 2017-12-04 This book presents the theoretical details and computational performances of algorithms used for solving continuous nonlinear optimization applications imbedded in GAMS Aimed toward scientists and graduate students who utilize optimization methods to model and solve problems in mathematical programming operations research business engineering and industry this book enables readers with a background in nonlinear optimization and linear algebra to use GAMS technology to understand and utilize its important capabilities to optimize algorithms for modeling and solving complex large scale continuous nonlinear optimization problems or applications Beginning with an overview of constrained nonlinear optimization methods this book moves on to illustrate key aspects of mathematical modeling through modeling technologies based on algebraically oriented modeling languages Next the main feature of GAMS an algebraically oriented language that allows for high level algebraic representation of mathematical optimization models is introduced to model and solve continuous nonlinear optimization applications More than 15 real nonlinear optimization applications in algebraic and GAMS representation are presented which are used to illustrate the performances of the algorithms described in this book Theoretical and computational results methods and techniques effective for solving nonlinear optimization problems are detailed through the algorithms MINOS KNITRO CONOPT SNOPT and IPOPT which work in GAMS technology
