stresses the difference between a well formed sentence and a meaningful one The final chapter brings these two aspects together to show the connections between syntax and semantics Each chapter concludes with exercises from a diverse range of languages and a list of major technical terms The book also includes a glossary as an essential resource for students approaching this difficult subject for the first time

Mood alternations : A synchronic and diachronic study of negated complement clauses in Spanish Raquel Montero Esteban, 2006-03-25 This book investigates Polarity Mood PM in Peninsular Spanish and how the phenomenon has evolved diachronically In particular it explores from a theoretical and empirical perspective the interaction of PM with five other linguistic phenomena i the verb class of the matrix predicate ii the presence of a first person subject iii the type of matrix clause iv information structure and v the presence of Negative Polarity Items Drawing inspiration from the competing grammars framework the book starts by proposing an account of mood morphology in terms of three competing systems one in which mood morphology is used as a hedging device to express the degree of commitment another in which mood is analyzed as a pronoun which indicates that the world of evaluation lies in some accessible Context Set and another in which mood is used as a purely grammaticalized syntactic marker The second part of the book shows how the historical competition between these systems explains the diachronic development observed in corpus data as well as the present day mood selection patterns
