Ebook: Complex Variables and Applications Ruel Churchill, James Brown, 2014-10-16 Complex Variables and Applications 9e will serve just as the earlier editions did as a textbook for an introductory course in the theory and application of functions of a complex variable This new edition preserves the basic content and style of the earlier editions The text is designed to develop the theory that is prominent in applications of the subject You will find a special emphasis given to the application of residues and conformal mappings To accommodate the different calculus backgrounds of students footnotes are given with references to other texts that contain proofs and discussions of the more delicate results in advanced calculus Improvements in the text include extended explanations of theorems greater detail in arguments and the separation of topics into their own sections

**Euclidean, Non-Euclidean, and Transformational Geometry** Shlomo Libeskind, Isa S. Jubran, 2024-10-22 This undergraduate textbook provides a comprehensive treatment of Euclidean and transformational geometries supplemented by substantial discussions of topics from various non Euclidean and less commonly taught geometries making it ideal for both mathematics majors and pre service teachers Emphasis is placed on developing students deductive reasoning skills as they are guided through proofs constructions and solutions to problems The text frequently emphasizes strategies and heuristics of problem solving including constructing proofs Where to begin How to proceed Which approach is more promising Are there multiple solutions proofs etc This approach aims not only to enable students to successfully solve unfamiliar problems on their own but also to impart a lasting appreciation for mathematics The text first explores at a higher level and in much greater depth topics that are normally taught in high school geometry courses definitions and axioms congruence circles and related concepts area and the Pythagorean theorem similarity isometries and size transformations and composition of transformations Constructions and the use of transformations to carry out constructions are emphasized The text then introduces more advanced topics dealing with non Euclidean and less commonly taught topics such as inversive hyperbolic elliptic taxicab fractal and solid geometries By examining what happens when one or more of the building blocks of Euclidean geometry are altered students will gain a deeper understanding of and appreciation for Euclidean concepts To accommodate students with different levels of experience in the subject the basic definitions and axioms that form the foundation of Euclidean geometry are covered in Chapter 1 Problem sets are provided after every section in each chapter and include nonroutine problems that students will enjoy exploring While not necessarily required the appropriate use of freely available dynamic geometry software and other specialized software referenced in the text is strongly encouraged this is especially important for visual learners and for forming conjectures and testing hypotheses

**Geometric Analysis of PDE and Several Complex Variables** Francois Trèves, 2005 This volume is dedicated to Francois Trèves who made substantial contributions to the geometric side of the theory of partial differential equations PDEs

and several complex variables One of his best known contributions reflected in many of the articles here is the study of hypo analytic structures An international group of well known mathematicians contributed to the volume Articles generally reflect the interaction of geometry and analysis that is typical of Treves s work such as the study of the special types of partial differential equations that arise in conjunction with CR manifolds symplectic geometry or special families of vector fields There are many topics in analysis and PDEs covered here unified by their connections to geometry The material is suitable for graduate students and research mathematicians interested in geometric analysis of PDEs and several complex variables

**Random Field Solutions Including Boundary Condition Uncertainty for the Steady-state Generalized Burgers Equation** Luc Huyse,2001 CFD results are subject to considerable uncertainty

associated with the operating conditions Even when the operational uncertainty is omitted under very controlled circumstances during wind tunnel experiments substantial disagreement between experimental and CFD results persists This discrepancy must be attributed to model uncertainty This report discusses the various sources of uncertainty The need for advanced uncertainty modeling is illustrated by means of a computationally inexpensive 1 D Burgers equation model We specifically address the uncertainty due to missing variables inexact or incomplete differential equations To this extent a random field model is used for the viscosity and the fundamental differences between the solutions of the stochastic differential equations and a simple random variable model is highlighted The Burgers equation theoretically needs to be integrated over an infinite domain In a deterministic approach the integration domain is cut off at some far field boundary This truncation effectively ignores all variability outside this far field boundary We present a practical treatment for the uncertainty on the boundary conditions The results indicate that ignoring the boundary condition uncertainty dramatically underestimates the variance of the velocity  $u(x)$  in the interior of the domain

*Orthogonal Polynomials* Mama Foupouagnigni, Wolfram Koepf, 2020-03-11 This book presents contributions of international and local experts from the African Institute for Mathematical Sciences AIMS Cameroon and also from other local universities in the domain of orthogonal polynomials and applications The topics addressed range from univariate to multivariate orthogonal polynomials from multiple orthogonal polynomials and random matrices to orthogonal polynomials and Painlevé equations The contributions are based on lectures given at the AIMS Volkswagen Stiftung Workshop on Introduction of Orthogonal Polynomials and Applications held on October 5-12 2018 in Douala Cameroon This workshop funded within the framework of the Volkswagen Foundation Initiative Symposia and Summer Schools was aimed globally at promoting capacity building in terms of research and training in orthogonal polynomials and applications discussions and development of new ideas as well as development and enhancement of networking including south south cooperation
