Project Planning, Scheduling, and Control in Construction Calin M. Popescu, Chotchai Charoenngam, 1995-03-20 Critical Path Method CPM and Performance Evaluation and Review Technique PERT are widely recognized as the most effective methods of keeping large complex construction projects on schedule under budget and up to professional standards But these methods remain underused because they are poorly understood and due to a host of unfamiliar terms and applications may seem more complicated than they really are This encyclopedia brings together in one comprehensive volume all terms definitions and applications related to the time and cost management of construction projects While many of these terms refer to ancient and venerable building practices others

have evolved quite recently and refer specifically to modern construction and management techniques. Sources include hundreds of professional books, trade journals, and research publications, as well as planning and scheduling software vendor literature. The detailed glossary of all applicable terms includes across-referenced listing of examples that describe real world applications for each term supplied. An extensive bibliography covers all applicable books, articles, and periodicals available on project planning, scheduling, and control using CPM and related subjects. This book is an important quick reference and desktop information resource for construction planners, schedulers, and controllers, as well as civil engineers and project managers. It is also the ultimate research tool for educators, students, or anyone who seeks to improve their understanding of the management of modern construction projects.

Saleh A. Mubarak, 2025-07-16. Comprehensive guide examining analytical methods used to devise an efficient and successful schedule for construction projects of all sizes. The newly revised and updated Fifth Edition of *Construction Project Scheduling and Control* describes the tools and methods that make projects run smoothly with invaluable information from a noted career construction professional along with updated information on Building Information Modeling (BIM) and new technologies impacting project scheduling. The first chapter is now replaced by two chapters on planning and scheduling separately. A new chapter on optimizing the schedule that applies all scheduling concepts has been added. The book also includes worked problems and exercises with scheduling software hints to enable students and practicing professionals to apply critical thinking to issues in construction scheduling. This Fifth Edition includes a revised chapter on the definition of the critical path which follows a discussion of resource management, schedule updating, and project control, schedule acceleration, risk, and other topics. This edition also includes numerous notes on all aspects of the project that may impact the schedule. In addition, it features a chapter on project scheduling and control as viewed through the owner's perspective, as well as an expanded glossary, a list of acronyms, and more. Instructors who adopt this book will be provided with valuable materials including PowerPoint lecture slides, an instructor's manual with complete solutions to the book's exercises, and additional questions for exams. Sample topics covered in *Construction Project Scheduling and Control* include: Planning and scheduling as two different but related concepts; Bar Gantt charts; Basic networks covering arrow networks, node networks, a comparison between the two networks versus bar charts, and time scaled logic diagrams; Precedence networks covering CPM calculations for precedence diagrams for contiguous and interruptible activities, and types of lags; Resource allocation and leveling covering labor, equipment, and materials, and assigning budgets in computer scheduling programs; Schedule updating and project control covering steps for updating a schedule, measuring work progress, and earned value management (EVM); Schedule acceleration concepts and techniques, and the impact of schedule acceleration on cost; Reports and documentation especially as related to the project schedule; Schedule risk management; Delay and other claims management; Other scheduling methods such as PERT and LSM; Dynamic Minimum Lag (DML) relationship, a new concept; BIM and other
