Digital Solutions in Construction Project Management: From Theory to Practice Nguyễn Tấn Tuấn, 2025-08-28

The construction industry is changing faster than ever before. In the past, projects relied heavily on paper-based documentation, manual reporting, and lengthy meetings. Today, digital technology has become an indispensable partner. From scheduling, cost control, and materials management to workforce coordination, everything can now be digitized and displayed clearly on a single screen with just a few clicks. Having spent many years directly involved in project management and technology deployment at Navycons and Consmaterial, I have witnessed the striking differences between traditional methods and digitalized management. In one project, delays and material shortages occurred due to unsynchronized warehouse data. Yet, within only a few months of implementing an ERP system, project progress improved by 25% and wasteful costs were significantly reduced. These experiences inspired me to write this book.

The Organization and Management of Construction David Langford, Arkady Retik, 2002-09-11. The proceedings of the CIB W65 Symposium on the Organization and Management of Construction conference are presented here and in the companion volumes as state-of-the-art papers documenting research and innovative practice in the field of construction. The volumes cover four broad themes: business management, project management, risk management, IT development and applications. Each volume is organized to provide easy reference so that the practitioner can speedily extract up-to-date information and knowledge about the global construction industry. **Managing the Construction Enterprise** (Volume One) covers the firm and its business environment, markets, and marketing, human resource management, strategic planning, and quality management. **Managing the Construction Project** (Volume Two) focuses upon productivity, procurement, international projects, and human issues in relation to management performance of construction organizations. **Managing Risk** (Volume Two) incorporates discussion of risk away from regulation by government and those safety risks inherent in the construction process. **Managing Construction Information** (Volume Three), published in conjunction with Construct IT Centre of Excellence, incorporates material on information systems and methods of application of IT to the design and construction processes and how IT theory and applications are best transmitted to students and practitioners. The work represents a collation of wide-ranging ideas and theory about construction and how research has contributed to the development of the industry on a global application of research to the problems of the construction industry.
